**3.3 The Directors did not have any interest in the issued share capital of the company.**

**3.4 The Directors interest in contracts with the Company during the year.**  
Punuka International Law firm provides retainership services for the Company of which Mr. Nnamdi Oragwu is a partner in the Law firm.

**Company information and statement of accounting policies**

**4 Share Capital and Shareholding**

**4.1 Authorized Share Capital**

The authorized share capital of the Company is ₦10,500,000,000 (2019: ₦8,000,000,000) made up of 10,500,000,000 (2019: ₦8,000,000,000) ordinary shares of ₦1.00 each.

**4.2 Called Up, Issued and Fully Paid Share Capital**

The issued and paid-up share capital of the Company currently is ₦5,366,666,666 (2019: ₦5,366,666,666) made up of 5,366,666,666 (2019: 5,366,666,666) ordinary Shares of ₦1.00 each. An analysis of the shareholding interest in the issued share capital of the Company is disclosed below:

	2020 No. of Ordinary Shares	2020 % Holding	2019 No. of Ordinary Shares	2019 % Holding
Royal Exchange Plc	3,260,383,121	60.75%	3,260,383,121	60.75%
Mr. K.E. Odogwu	3	0.00%	3	0.00%
INSURELIENCE INVESTMENT FUND	2,106,283,542	39.25%	2,106,283,542	39.25%
Total	5,366,666,666	100%	5,366,666,666	100%

InsuResilience Investment Fund ("IIF") is Luxembourg-based that was set up by KfW, the German Development Bank on behalf of German Ministry for Economic Cooperation and Development (BMZ). The overall objective of the IIF is to contribute to the adaptation to climate change by improving access to and the use of Insurance in developing countries. Royal Exchange General Insurance Company Limited is a wholly owned subsidiary of Royal Exchange Plc before IIF took over 39.25% of REPLC equity investment in the Company in October 2019.

**5 Property and Equipment**

Information relating to changes in property and equipment during the year is shown in Note 14 to the financial statements. In the opinion of the Directors, the fair value of the Company's properties is not less than the value shown in the accounts.

**6 Donations**

The Company donated ₦2,000,000.00 to NAICOM as COVID 19 support (2019: Nil).

**7 COVID-19 Measures and Response**

In response to the need to mitigate the adverse effects of COVID-19 pandemic, the Company introduced a wide range of measures to ensure stability of its operations and support for customers. A Covid response committee was set up, the membership ranging from executive management to middle managers. Covid 19 champions were also appointed amongst staff for adequate monitoring of the implementation of the management actions in place. All stakeholders were taken into consideration and partnering was ensued with all stakeholders in critical functions to facilitate seamless delivery of services and operations. A reporting structure was put in place, for daily updates to top Management for effective decision making. Internal and external communication was handled by the Human Resource (HR) and Corporate communications. The Company instituted safety measures across all locations and these included temperature checks, fumigation of office locations, enforcement of the use of face masks, social distancing and installation of hand sanitizing machines in all company locations. Remote Working was facilitated via the installation of secure VPN by the IT Unit, and resources were also on hand to tackle all IT related issues

As a result of the management actions taken to mitigate the impact of Covid-19 Pandemic, the pandemic had no significant effects on the going concern operations of the company during the Financial year

**Company information and statement of accounting policies**

**8 Events after Reporting Date**

There are no other events after the end of the reporting period which could have a material effect on the financial statements of the Company which have not been recognised and/or disclosed.

**9 Agents, Brokers and Intermediaries**

The Company maintains a network of licensed agents throughout the country. The Company also renders services to its customers through a varied network of brokers licensed by the National Insurance Commission.

**10 Employers' Involvement, Training and Welfare**

**10.1 Employment of Physically Challenged Persons**

It is the policy of the Company that there will be no discrimination in the consideration of all applications for employment. As 31 December, 2020 (2019: nil), there was no disabled person employed by the Company.

**10.2 Health and Safety at Work and Welfare of Employees**

The Company is concerned about the health, safety and welfare of its employees as well as safety of all visitors. The Company provides medical services to its staff through health insurance with a registered Health Management Organization.

**10.3 Involvement and Consultation**

The Company's consultation medium was fully used in the year to disseminate management policies and encourage the employees' involvement in its affairs.

**10.4 Training**

The Company recognizes that the acquisition of knowledge is constant. The Company recognizes also that to foster commitment its employees need to hone their awareness of factors, economic, financial or otherwise, that affects its growth. To this end, the Company, in the execution of its training programs encourages and provides the opportunity for its staff to develop and enhance their skill awareness and horizon.

**11 Auditors**

The Auditors, Messer Deloitte & Touche (Chartered Accountants) was re-appointed during the year as Auditors of the company in line with S.401(1) of CAMA 2020. The auditors having satisfied the requirement of NAICOM and the company, have indicated their willingness to continue in office during the year.

**12 Compliance with the Code of Best Practices on Corporate Governance**

The Directors confirm that they have reviewed the structure and activities of the Company in view of the Code of Best Practices on Corporate Governance for the Insurance Industry in Nigeria published in February, 2009. The Directors confirm that the Company has substantially complied with the provisions of the Code of Best Practices on Corporate Governance with regards to matters stated therein concerning the Board of Directors, the Shareholders and the Audit Committee.

## Company information and statement of accounting policies

### Statement of Directors' responsibilities for the preparation and approval of the Financial Statements

The Directors of Royal Exchange General Insurance Company Limited accept responsibility for the preparation of the financial statements that give a true and fair view of the financial position of the Company as at 31 December 2020, and the results of its operations, cash flows and changes in equity for the year then ended, in compliance with International Financial Reporting Standards ("IFRS") and in the manner required by the Companies and Allied Matters Act of Nigeria, the Insurance Act CAP I17 LFN 2004, relevant guidelines and circulars issued by the National Insurance Commission ("NAICOM") and the Financial Reporting Council of Nigeria Act, 2011.

In preparing the financial statements, the Directors are responsible for:

- \* properly selecting and applying accounting policies;
- \* presenting information, including accounting policies, in a manner that provides relevant, reliable, comparable and understandable information;
- \* providing additional disclosures when compliance with the specific requirements in IFRSs are insufficient to enable users to understand the impact of particular transactions, other events and conditions on the Company's financial position and financial performance; and

### Going Concern

The directors have made an assessment of the Company's ability to continue as a going concern and have no reason to believe the company will not remain a going concern in the year ahead.

### Certification of financial statements

In accordance with section 405 of the Companies and Allied Act of Nigeria, the Chief Executive Officer and the Chief Financial Officer certify that the financial statements have been reviewed and based on our knowledge, the

- \* audited financial statements do not contain any untrue statement of material fact or omit to state a material fact, which would make the statements misleading, in the light of the circumstances under which such statement was made, and
- \* audited financial statements and all other financial information included in the statements fairly present, in all material respects, the financial condition and results of operation of the company as of and for, the periods covered by the audited financial statements;

We state that management and directors:

- \* are responsible for establishing and maintaining internal controls and has designed such internal controls to ensure that material information relating to the Company is made known to the officer by other officers of the company, particularly during the period in which the audited financial statement report is being prepared,
- \* has evaluated the effectiveness of the company's internal controls within 90 days prior to the date of its audited financial statements, and
- \* certifies that company's internal controls are effective as of that date;

We have disclosed:

- \* all significant deficiencies in the design or operation of internal controls which could adversely affect the company's ability to record, process, summarise and report financial data, and has identified for the company's auditors any material weaknesses in internal controls, and
- \* whether or not, there is any fraud that involves management or other employees who have a significant role in the company's internal control; and
- \* as indicated in the report, whether or not, there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of their evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.

The financial statements of the company for the year ended 31 December 2020 were approved by the Board of Directors on 21 April, 2020.

Signed by order of the Board of Directors:

Chief U. Okpa-Obaji  
Director  
(FRC/2014/MULTI/00000010359)  
21 April, 2021

Toyin Azeez

## INDEPENDENT AUDITOR'S REPORT

To the Shareholders of Royal Exchange General Insurance Company Limited:

### Report on the Audit of the financial statements

#### Opinion

We have audited the financial statements of Royal Exchange General Insurance Company Limited set out on pages 36 to 121, which comprise the statement of financial position as at 31 December 2020, the statement of profit or loss and other comprehensive income, the statement of changes in equity and the statement of cash flows for the year then ended, the notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the financial statements give a true and fair view of financial position of Royal Exchange General Insurance Company Limited as at 31 December 2020, and its financial performance and cash flows for the year then ended in accordance with International Financial Reporting Standards, the requirements of the Companies and Allied Matters Act 2020, Insurance Act CAP I17 LFN 2004, NAICOM Circulars and guidelines and Financial Reporting Council Act, 2011.

#### Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with the requirements of the International Ethics Standards Board for Accountants' (IESBA) International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA code) and other independence requirements applicable to performing audits of financial statements in Nigeria. We have fulfilled our other ethical responsibilities in accordance with the IESBA Code and other ethical requirements that are relevant to our audit of Financial Statements in Nigeria.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

#### Key Audit Matters

Key audit matters are the matter that, in our professional judgment, was of most significance in our audit of the financial statements of the current year. The matter was addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on the matters.

Key Audit Matter	How the matter was addressed in the audit
<p><del>Valuation of Insurance Contract Liabilities</del></p> <p>Under IFRS 4, the Company is required to perform liability adequacy test on its insurance contract liabilities to ensure the carrying value of the liabilities is adequate.</p> <p>As disclosed in note 23 to the financial statements, the insurance contract liabilities of the Company amounted to N4.04billion [2019: N4.59 billion]. This represents about 37% of the Company total liabilities as at 31 December 2020.</p>	<p>Our procedures included the following among others:</p> <p>We assessed and tested the design and operating effectiveness of selected key controls over actuarial methodology, integrity of data used in the actuarial valuation, the assumptions setting and governance processes used by management related to the valuation of general insurance reserves.</p> <p>In relation to the particular matters set out above, our substantive testing procedures included the following:</p>

Reserves for losses and loss adjustment expenses represent estimates of future payments of reported and unreported claims for losses and related expenses as at 31 December 2020. This involves exercise of significant judgement and use of key inputs and assumptions such as inflation, claims development patterns and regulatory changes. Specifically, long-tail lines of business, which often have low frequency, high severity claims settlements, are generally more difficult to project and subject to greater uncertainties than short-tail, high frequency claims. Further, not all catastrophic events can be modelled using actuarial methodologies, which increases the degree of judgment needed in estimating general insurance loss reserves.

At the end of each financial year, management employ the services of an external actuary in the determination of its insurance liability after considering the accuracy and integrity of data used in the valuation. Necessary adjustments are made in the financial statements to reflect the liabilities determined by the actuary.

- Tested the completeness and accuracy of underlying claims data utilized by the company's actuaries in estimating general insurance loss reserves.
- Utilized information technology audit techniques to analyze claims through claims data plausibility checks and recalculation of claims development patterns.
- Involved Deloitte's actuarial specialists to independently test management's general insurance loss reserve studies and evaluate the reasonableness of the methodology and assumptions used against recognized actuarial practices and industry standards.
- Performed independent re-projections on selected product lines, particularly focusing on the largest and most uncertain general insurance reserves. For these product lines our actuarial specialists compared their re-projected reserves to those recorded by the company, and sought to understand any significant differences.

Performed sensitivity testing and evaluated the appropriateness of any significant adjustments made to management's general insurance reserve estimates.

Based on the work performed we determined that the methodology and assumptions used by management in the valuation of insurance contract liabilities reserves are reasonable and in line with financial reporting requirements and industry accepted practice.

## Other Information

The directors are responsible for the other information. The other information comprises the Directors' Report, the Audit Committee's Report and the Company Secretary's Report, which we obtained prior to the date of this report, and the Annual Report, which is expected to be made available to us after that date. The other information does not include the financial statements and our auditor's report thereon.

Our opinion on the financial statements does not cover the other information and we do not and will not express an audit opinion or any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed on the other information obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

## Responsibilities of the directors for the Financial Statements

The directors are responsible for the preparation and fair presentation of the financial statements in accordance with International Financial Reporting Standards, the requirements of the Companies and Allied Matters Act, the Insurance Act CAP I17 LFN 2004, the Financial Reporting Council Act, 2011 and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the Company or to cease operations, or have no realistic alternative but to do so.

# Deloitte.

## Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the directors.
- Conclude on the appropriateness of the directors' use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

## Report on Other Legal and Regulatory Requirements

In accordance with the Fifth Schedule of the Companies and Allied Matters Act, Section 28(2) of the Insurance Act CAP 117 LFN 2004, we expressly state that:

- i) We have obtained all the information and explanation which to the best of our knowledge and belief were necessary for the purpose of our audit.
- ii) The Company have kept proper books of account, so far as appears from our examination of those books.
- iii) The Company's statement of financial position and its statement of profit or loss and other comprehensive income are in agreement with the books of account.

No contravention of any sections of Insurance Act or NAICOM circulars and guidelines came to our knowledge during the year ended 31 December, 2020.

**Company information and statement of accounting policies**

**1 Reporting Entity**

Royal Exchange General Insurance Company Limited is a private limited liability company registered in Nigeria by the Corporate Affairs Commission with registration number 725727 and registered office at New Africa House, 31 Marina, Lagos. It was licensed to transact general insurance business by the National Insurance Commission ("NAICOM") on July, 9th 2008.

Its principal activities include general insurance underwriting, claims payment and investments. These services, supported by outstanding customer service, are primarily undertaken in Nigeria.

The company is jointly owned by Royal Exchange Plc and Insure silience Fund Investment Fund, issued and fully paid share capital of 3,260,383,121 and 2,106,283,542 ordinary shares of N1.00 each respectively.

**2 Basis of preparation**

**(a) Statement of compliance with International Financial Reporting Standards**

The financial statements for the year ended 31 December 2020 have been prepared in accordance with, and comply with the, International Financial Reporting Standards (IFRS) issued by the International Accounting Standards Board (IASB). The financial statements comply with the Companies and Allied Matters Act of Nigeria, the Financial Reporting Council of Nigeria Act, 2011, the Insurance Act 2003 and National Insurance Commission of Nigeria ("NAICOM") circulars.

These financial statements comprise the statement of comprehensive income, the statement of financial position, the statement of changes in equity, the cash flow statement and the accompanying notes

**(b) Functional and presentation currency**

The financial statements is presented in Naira, which is the Company's functional currency. Financial information presented in Naira has been rounded to the nearest thousands except where indicated.

**(c) Basis of measurement**

These financial statements have been prepared on the going concern principle and on a historical cost basis except for the following:

<i>Measurement basis</i>	<i>Details</i>
<b>(i) At fair value</b>	<ul style="list-style-type: none"> <li>• financial instruments at fair value through profit or loss;</li> <li>• financial instruments at fair value through other comprehensive income;</li> <li>• investment properties.</li> </ul>
<b>(ii) Measured at present value</b>	<ul style="list-style-type: none"> <li>• Retirement benefit obligations are measured in terms of the projected unit credit method;</li> </ul>
<b>(iii) Measured at amortised cost</b>	<ul style="list-style-type: none"> <li>• financial liabilities at amortised cost;</li> </ul>
<b>(iv) Measure at actuarial value</b>	<ul style="list-style-type: none"> <li>• Insurance contract liabilities</li> </ul>
<b>(v) Cost plus share of profit</b>	<ul style="list-style-type: none"> <li>• Investment in associates</li> </ul>

The Company adopts the accrual basis of accounting where it records accounting transactions for revenue when earned and expenses when incurred.

**(d) Reporting period**

The financial statements have been prepared for the 12 month period ended 31 December 2020.

**Company information and statement of accounting policies**

**(e) Use of estimates and judgment**

In preparing the financial statements, management has made judgements, estimates and assumptions that affect the application of the Company's accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to estimates are recognised prospectively.

Information about significant areas of estimation uncertainties and critical judgements in applying accounting policies that have the most significant effect on the amounts recognised in the financial statements are disclosed in Note 5.

**(f) Changes in accounting policies and disclosures**

New and revised IFRSs/IFRICs affecting amounts reported and/or disclosures in these financial statement

**Impact of the initial application of Interest Rate Benchmark Reform amendments to IFRS 9 and IFRS 7**

In September 2020, the IASB issued Interest Rate Benchmark Reform (Amendments to IFRS 9, IAS 39 and IFRS 7). These amendments modify specific hedge accounting requirements to allow hedge accounting to continue for affected hedges during the period of uncertainty before the hedged items or hedging instruments affected by the current interest rate benchmarks are amended as a result of the on-going interest rate benchmark reforms.

The amendments also introduce new disclosure requirements to IFRS 7 for hedging relationships that are subject to the exceptions introduced by the amendments to IFRS 9.

**Impact of the initial application of Covid-19-Related Rent Concessions Amendment to IFRS 16**

In May 2020, the IASB issued Covid-19-Related Rent Concessions (Amendment to IFRS 16) that provides practical relief to lessees in accounting for rent concessions occurring as a direct consequence of COVID-19, by introducing a practical expedient to IFRS 16. The practical expedient permits a lessee to elect not to assess whether a COVID-19-related rent concession is a lease modification. A lessee that makes this election shall account for any change in lease payments resulting from the COVID-19-related rent concession the same way it would account for the change applying IFRS 16 if the change were not a lease modification.

The practical expedient applies only to rent concessions occurring as a direct consequence of COVID-19 and only if all of the following conditions are met.

- 1 The change in lease payments results in revised consideration for the lease that is substantially the same as, or less than, the consideration for the lease immediately preceding the change;
- 2 Any reduction in lease payments affects only payments originally due on or before 30 June 2021 (a rent concession meets this condition if it results in reduced lease payments on or before 30 June 2021 and increased lease payments that extend beyond 30 June 2021); and
- 3 There is no substantive change to other terms and conditions of the lease.

The amendment is not applicable to Royal Exchange General Insurance Company Limited as the company does not have operating leases qualified for the application of IFRS 16, hence it was not applied.

**Impact of the initial application of new and amended IFRS Standards that are effective for the current year**

**Amendments to IAS 1 and IAS 8 Definition of material**

The Company has adopted the amendments to IAS 1 and IAS 8 in the current year.

**Company information and statement of accounting policies**

The amendments make the definition of material in IAS 1 easier to understand and are not intended to alter the underlying concept of materiality in IFRS Standards. The concept of 'obscuring' material information with immaterial information has been included as part of the new definition. The threshold for materiality influencing users has been changed from 'could influence' to 'could reasonably be expected to influence'. The definition of material in IAS 8 has been replaced by a reference to the definition of material in IAS 1.

**g) Standards, amendments and interpretations issued but not yet effective**

At the date of authorisation of these financial statements, the Company has not applied the following new and revised IFRS Standards that have been issued but are not yet effective;

**i) IFRS 17: Insurance Contracts**

IFRS 17 establishes the principles for the recognition, measurement, presentation and disclosure of insurance contracts and supersedes IFRS 4 Insurance Contracts. IFRS 17 outlines a general model, which is modified for insurance contracts with direct participation features, described as the variable fee approach. The general model is simplified if certain criteria are met by measuring the liability for remaining coverage using the premium allocation approach. The general model uses current assumptions to estimate the amount, timing and uncertainty of future cash flows and it explicitly measures the cost of that uncertainty. It takes into account market interest rates and the impact of policyholders' options and guarantees.

The Standard is effective for annual reporting periods beginning on or after 1 January 2021, with early application permitted. It is applied retrospectively unless impracticable, in which case the modified retrospective approach or the fair value approach is applied. An exposure draft Amendments to IFRS 17 addresses concerns and implementation challenges that were identified after IFRS 17 was published. One of the main changes proposed is the deferral of the date of initial application of IFRS 17 by one year to annual periods beginning on or after 1 January 2023. For the purpose of the transition requirements, the date of initial application is the start of the annual reporting period in which the entity first applies the Standard, and the transition date is the beginning of the period immediately preceding the date of initial application.

**ii) IFRS 10 and IAS 28 (amendments): Sale or Contribution of Assets between an Investor and its Associate or Joint Venture**

The amendments to IFRS 10 and IAS 28 deal with situations where there is a sale or contribution of assets between an investor and its associate or joint venture. Specifically, the amendments state that gains or losses resulting from the loss of control of a subsidiary that does not contain a business in a transaction with an associate or a joint venture that is accounted for using the equity method, are recognised in the parent's profit or loss only to the extent of the unrelated investors' interests in that associate or joint venture. Similarly, gains and losses resulting from the re-measurement of investments retained in any former subsidiary (that has become an associate or a joint venture that is accounted for using the equity method) to fair value are recognised in the former parent's profit or loss only to the extent of the unrelated investors' interests in the new associate or joint venture.

The effective date of the amendments has yet to be set by the IASB; however, earlier application of the amendments is permitted. The directors of the Company anticipate that the application of these amendments may have an impact on the Company's financial statements in future periods should such transactions arise.

**iii) Amendments to IAS 1 – Classification of Liabilities as Current or Non-current**

The amendments to IAS 1 affect only the presentation of liabilities as current or non-current in the statement of financial position and not the amount or timing of recognition of any asset, liability, income or expenses, or the information disclosed about those items.

**Company information and statement of accounting policies**

The amendments clarify that the classification of liabilities as current or non-current is based on rights that are in existence at the end of the reporting period, specify that classification is unaffected by expectations about whether an entity will exercise its right to defer settlement of a liability, explain that rights are in existence if covenants are complied with at the end of the reporting period, and introduce a definition of 'settlement' to make clear that settlement refers to the transfer to the counterparty of cash, equity instruments, other assets or services.

The amendments are applied retrospectively for annual periods beginning on or after 1 January 2023, with early application permitted.

**iv) Amendments to IAS 16 – Property, Plant and Equipment—Proceeds before Intended Use**

The amendments prohibit deducting from the cost of an item of property, plant and equipment any proceeds from selling items produced before that asset is available for use, i.e. proceeds while bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Consequently, an entity recognizes such sales proceeds and related costs in profit or loss. The entity measures the cost of those items in accordance with IAS 2 Inventories. The amendments also clarify the meaning of 'testing whether an asset is functioning properly'. IAS 16 now specifies this as assessing whether the technical and physical performance of the asset is such that it is capable of being used in the production or supply of goods or services, for rental to others, or for administrative purposes. If not presented separately in the statement of comprehensive income, the financial statements shall disclose the amounts of proceeds and cost included in profit or loss that relate to items produced that are not an output of the entity's ordinary activities, and which line item(s) in the statement of comprehensive income include(s) such proceeds and cost. The amendments are effective for annual periods beginning on or after 1 January 2022, with early application permitted.

**v) Amendments to IAS 37 - Onerous Contracts—Cost of Fulfilling a Contract**

The amendments specify that the 'cost of fulfilling' a contract comprises the 'costs that relate directly to the contract'. Costs that relate directly to a contract consist of both the incremental costs of fulfilling that contract (examples would be direct labour or materials) and an allocation of other costs that relate directly to fulfilling contracts (an example would be the allocation of the depreciation charge for an item of property, plant and equipment used in fulfilling the contract).

The amendments apply to contracts for which the entity has not yet fulfilled all its obligations at the beginning of the annual reporting period in which the entity first applies the amendments. Comparatives are not restated. Instead, the entity shall recognize the cumulative effect of initially applying the amendments as an adjustment to the opening balance of retained earnings or other component of equity, as appropriate, at the date of initial application.

The amendments are effective for annual periods beginning on or after 1 January 2022, with early application permitted.

**Annual Improvements to IFRS Standards 2018 - 2020**

The Annual Improvements include amendments to four Standards.

**IFRS 1 First-time Adoption of International Financial Reporting Standards**

The amendment provides additional relief to a subsidiary which becomes a first-time adopter later than its parent. In respect of accounting for cumulative translation differences. As a result of the amendment, a subsidiary that uses the exemption in IFRS 1:D16(a) can now also elect to measure cumulative translation differences for all foreign operations at the carrying amount that would be included in the parent's consolidated financial statements, based on the parent's date of transition to IFRS Standards, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary.

## Company information and statement of accounting policies

The amendment is effective for annual periods beginning on or after 1 January 2022, with early application permitted.

### IFRS 9 Financial Instruments

The amendment clarifies that in applying the '10 per cent' test to assess whether to derecognise a financial liability, an entity includes only fees paid or received between the entity (the borrower) and the lender, including fees paid or received by either the entity or the lender on the other's behalf. The amendment is applied prospectively to modifications and exchanges that occur on or after the date the entity first applies the amendment.

The amendment is effective for annual periods beginning on or after 1 January 2022, with early application permitted.

### IFRS 16 Leases

The amendment removes the illustration of the reimbursement of leasehold improvements. As the amendment to IFRS 16 only regards an illustrative example, no effective date is stated.

### IAS 41 Agriculture

The amendment removes the requirement in IAS 41 for entities to exclude cash flows for taxation when measuring fair value. This aligns the fair value measurement in IAS 41 with the requirements of IFRS 13 Fair Value Measurement to use internally consistent cash flows and discount rates and enables preparers to determine whether to use pretax or post-tax cash flows and discount rates for the most appropriate fair value measurement.

The amendment is effective for annual periods beginning on or after 1 January 2022, with early application.

## 3 Summary of Significant Accounting Policies

The Company consistently applied the following accounting policies to the periods presented in the financial statements

### (a) Foreign currency transactions

Transactions in foreign currencies are translated into the functional currency of the Company at the exchange rates and the dates of the transactions.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the exchange rate at the reporting date. Non-monetary assets and liabilities that are measured at fair value in a foreign currency are translated into the functional currency at the exchange rate when the fair value was determined. Non-monetary items that are measured based on historical cost in a foreign currency are translated at the exchange rate at the date of the transaction. Foreign currency differences are generally recognised in profit or loss.

However, foreign currency differences arising from the translation of the following items are recognised in Other Comprehensive Income (OCI):

- unquoted equity investments (except on impairment, in which case foreign currency differences that have been recognised in OCI are reclassified to profit or loss).

### (b) Cash and Cash Equivalents

Cash comprises cash in hand, and demand deposits. Cash equivalents are short-term highly liquid investments that are readily convertible to known amounts of cash and that are subject to insignificant risk of changes in their fair value. Cash equivalents comprise investments with original maturities of three months or less and used by the Company to manage its short - term commitments.

Company information and statement of accounting policies

Cash and cash equivalents are carried at amortised cost in the statement of financial position. For the purpose of the statement of cash flows, cash and cash equivalents are net of outstanding overdrafts.

(c) Financial assets and liabilities

Measurement methods

**Amortised cost and effective interest rate**

The amortised cost is the amount at which the financial asset or financial liability is measured at initial recognition minus the principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount and, for financial assets, adjusted for any loss allowance.

The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability to the gross carrying amount of a financial asset (i.e. its amortised cost before any impairment allowance) or to the amortised cost of a financial liability. The calculation does not consider expected credit losses, but includes transaction costs, premiums or discounts and fees and points paid or received that are integral to the effective interest rate, such as origination fees. For originated credit impaired financial assets i.e. assets that are credit impaired at initial recognition, the Company calculates the credit-adjusted effective interest rate, which is calculated based on the amortised cost of the financial asset instead of its gross carrying amount and incorporates the impact of expected credit losses in estimated cash flows. The company does not purchase credit impaired assets.

When the company revises the estimates of future cash flows, the carrying amount of the respective financial assets or financial liability is adjusted to reflect the new estimate discounted using the original effective interest rate. Any changes are recognised in profit or loss.

**Interest income**

Interest income is calculated by applying the effective interest rate to the gross carrying amount of financial assets except for:

- Originated credit impaired assets for which the original credit adjusted effective interest rate is applied to the amortised cost of the financial asset
- financial assets that are not originated credit impaired but have subsequently become credit-impaired (or stage 3), for which interest revenue is calculated by applying the interest rate to their amortised cost (i.e. net of expected credit loss provision).

**Initial recognition and measurement**

Financial assets and financial liabilities are recognised when the entity becomes a party to the contractual provisions of the instrument. Regular way purchases and sales of financial assets are recognised on trade-date, the date on which the Company commits to purchase or sell the asset.

At initial recognition, the Company measures a financial asset or financial liability at its fair value plus or minus transaction costs that are incremental and directly attributable to the acquisition or issue of the financial asset or financial liability, such as fees and commissions. Transaction costs of financial assets and financial liabilities carried at fair value through profit or loss are expensed in profit or loss. Immediately after initial recognition, an expected credit loss allowance (ECL) is recognised for financial assets measured at amortised cost and investments in debt instruments measured at FVOCI as described in note 5(ii)(b) which results in an accounting loss being recognised in profit or loss when an asset is newly originated.

When the fair value of financial assets and liabilities differs from the transaction price on initial recognition, the entity recognises the difference as follows:

Company information and statement of accounting policies

- (a) When the fair value is evidenced by a quoted price in an active market for an identical asset or liability (i.e. a Level 1 input) or based on a valuation technique that uses only data from observable markets, the difference is recognised as a gain or loss.
- (b) In all other cases, the difference is deferred and the timing of recognition of deferred day one profit or loss is determined individually. It is either amortised over the life of the instrument, deferred until the instrument's fair value can be determined using market observable inputs, or realised through settlement.

(d) Financial assets

(i) **Classification and subsequent measurement**

The Company classifies its financial assets in the following measurement categories:

- Fair value through profit or loss (FVPL);
- Fair value through other comprehensive income (FVOCI); or
- Amortised cost

The classification requirements for debt and equity instruments are described below:

**Debt instruments**

Debt instruments are those instruments that meet the definition of a financial liability from the issuer's perspective, such as loans and government treasury bills.

Classification and subsequent measurement of debt instruments depend on:

- (i) the Company's business model for managing the asset; and
- (ii) the cash flow characteristics of the asset.

**Business model:** the business model reflects how the company manages the assets in order to generate cash flows. That is, whether the company's objective is solely to collect the contractual cash flows from the assets or is to collect both the contractual cash flows and cash flows arising from the sale of assets. If neither of these is applicable (e.g. financial assets are held for trading purposes), then the financial assets are classified as part of 'other business model' and measured at FVTPL. Factors considered by the company in determining the business model for an entity of assets include past experience on how the cash flows for these assets were collected, how the asset's performance is evaluated and reported to key management personnel, how risks are assessed and managed and how managers are compensated.

**SPPI:** Where the business model is to hold assets to collect contractual cash flows or to collect contractual cash flows and sell, the company assesses whether the financial instruments' cash flows represent solely payments of principal and interest (the 'SPPI test'). In making this assessment, the company considers whether the contractual cash flows are consistent with a basic lending arrangement i.e. interest includes only consideration for the time value of money, credit risk, other basic lending risks and a profit margin that is consistent with a basic lending arrangement. Where the contractual terms introduce exposure to risk or volatility that are inconsistent with a basic lending arrangement, the related financial asset is classified and measured at fair value through profit or loss.

Based on these factors, the company classifies its debt instruments into one of the following three measurement categories:

- 1) **Amortised cost:** Assets that are held for collection of contractual cash flows where those cash flows represent solely payments of principal and interest ('SPPI'), and that are not designated at FVPL, are measured at amortised cost.

## Company information and statement of accounting policies

The carrying amount of these assets is adjusted by any expected credit loss allowance recognised and measured as described in note 5(ii)(b). Interest income from these financial assets is included in 'Net investment income' using the effective interest rate method.

- 2) Fair value through other comprehensive income (FVOCI): Financial assets that are held for collection of contractual cash flows and for selling the assets, where the assets' cash flows represent solely payments of principal and interest, and that are not designated at FVPL, are measured at fair value through other comprehensive income (FVOCI). Movements in the carrying amount are taken through OCI, except for the recognition of impairment gains or losses, interest revenue and foreign exchange gains and losses on the instrument's amortised cost which are recognised in profit or loss. When the financial asset is derecognised, the cumulative gain or loss previously recognised in OCI is reclassified from equity to profit or loss. Interest income from these financial assets is included in 'Net investment income' using the effective interest rate method.
- 3) Fair value through profit or loss: Assets that do not meet the criteria for amortised cost or FVOCI are measured at fair value through profit or loss. A gain or loss on a debt investment that is subsequently measured at fair value through profit or loss and is not part of a hedging relationship is recognised in profit or loss and presented in the profit or loss statement within 'Net fair value gain/(loss) on financial assets' in the period in which it arises, unless it arises from debt instruments that were designated at fair value or which are not held for trading, in which case they are presented separately in 'Investment and other income'. Interest income from these financial assets is included in 'Investment and other income' using the effective interest rate method. As at the reporting date, the company has no debt instruments within this category.

The Company reclassifies debt investments when and only when its business model for managing those assets changes. The reclassification takes place from the start of the first reporting period following the change. Such changes are expected to be very infrequent and none occurred during the period.

### Equity instruments

Equity instruments are instruments that meet the definition of equity from the issuer's perspective; that is, instruments that do not contain a contractual obligation to pay and that evidence a residual interest in the issuer's net assets. Equity instruments held by the Company include ordinary shares of other entities.

The Company subsequently measures all equity investments at fair value through profit or loss, except where the Company's management has elected, at initial recognition, to irrevocably designate an equity investment at fair value through other comprehensive income. The Company designates equity investments at fair value through other comprehensive income on an equity by equity basis. When this election is used, fair value gains and losses are recognised in OCI and are not subsequently reclassified to profit or loss, including on disposal. Impairment losses (and reversal of impairment losses) are not reported separately from other changes in fair value. Dividends, when representing a return on such investments, continue to be recognised in profit or loss as other income when the Company's right to receive payments is established.

As at the reporting date, the company designated all its unlisted equity investment and certain listed equity investments at fair value through comprehensive income.

Gains and losses on equity investments at FVPL are included in the statement of profit or loss within 'fair value gains and losses on assets'.

**Company information and statement of accounting policies**

**(ii) Impairment**

The Company assesses on a forward-looking basis the expected credit losses ('ECL') associated with its debt instrument assets carried at amortised cost and FVOCI.

The company has no exposures arising from loan commitments and financial guarantee contracts. The Company recognises a loss allowance for such losses at each reporting date. The measurement of ECL reflects:

- An unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;
- The time value of money; and
- Reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions.

Note 5(ii)(b) provides more detail of how the expected credit loss allowance is measured.

**(iii) Modification of loans**

The Company sometimes renegotiates or otherwise modifies the contractual cash flows of loans to customers. When this happens, the Company assesses whether or not the new terms are substantially different to the original terms. The Company does this by considering, among others, the following factors:

- If the borrower is in financial difficulty, whether the modification merely reduces the contractual cash flows to amounts the borrower is expected to be able to pay.
- Whether any substantial new terms are introduced, such as a profit share/equity-based return that substantially affects the risk profile of the loan.
- Significant extension of the loan term when the borrower is not in financial difficulty.
- Significant change in the interest rate.
- Insertion of collateral, other security or credit enhancements that significantly affect the credit risk associated with the loan.

Where the terms are substantially different, the Company derecognises the original financial asset and recognises a 'new' asset at fair value and recalculates a new effective interest rate for the asset. The date of renegotiation is consequently considered to be the date of initial recognition for impairment calculation purposes, including for the purpose of determining whether a significant increase in credit risk has occurred. However, the Company also assesses whether the new financial asset recognised is deemed to be credit-impaired at initial recognition, especially in circumstances where the renegotiation was driven by the debtor being unable to make the originally agreed payments. Differences in the carrying amount are also recognised in profit or loss as a gain or loss on derecognition.

Where the terms are not substantially different, the renegotiation or modification does not result in derecognition, and the Company recalculates the gross carrying amount based on the revised cash flows of the financial asset and recognises a modification gain or loss in profit or loss. The new gross carrying amount is recalculated by discounting the modified cash flows at the original effective interest rate (or credit adjusted effective interest rate for originated credit-impaired financial assets).

**(iv) Derecognition other than on a modification**

Financial assets, or a portion thereof, are derecognised when the contractual rights to receive the cash flows from the assets have expired, or when they have been transferred and either (i) the Company transfers substantially all the risks and rewards of ownership, or (ii) the Company neither transfers nor retains substantially all the risks and rewards of ownership and the Company has not retained control.

**Company information and statement of accounting policies**

**(e) Financial liabilities**

**(i) Classification and subsequent measurement**

In both the current and prior period, financial liabilities are classified as subsequently measured at amortised cost. The company has no financial liabilities measured at fair value through profit or loss.

**(ii) Fair value measurement**

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or, in its absence, the most advantageous market to which the Company has access at that date. The fair value of a liability reflects its non-performance risk.

When available, the Company measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as active if transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.

If there is no quoted price in an active market, then the Company uses valuation techniques that maximise the use of relevant observable inputs and minimise the use of unobservable inputs. The chosen valuation technique incorporates all of the factors that market participants would take into account in pricing a transaction

The best evidence of the fair value of a financial instrument at initial recognition is normally the transaction price - i.e. the fair value of the consideration given or received. If the Company determines that the fair value at initial recognition differs from the transaction price and the fair value is evidenced neither by a quoted price in an active market for an identical asset or liability nor based on a valuation technique that uses only data from observable markets, then the financial instrument is initially measured at fair value, adjusted to defer the difference between the fair value at initial recognition and the transaction price. Subsequently, that difference is recognised in profit or loss on an appropriate basis over the life of the instrument but no later than when the valuation is wholly supported by observable market data or the transaction is closed out.

If an asset or liability measured at fair value has a bid price and an ask price, then the Company measures the assets and long positions at a bid price and liabilities and short positions at an ask price.

The fair value of a non-interest bearing liability is stated at the invoice amount if the impact of discounting is not material.

The Company recognises transfers between levels of the fair value hierarchy as of the end of the reporting period during which the change has occurred.

**(iii) Impairment of financial assets**

Financial assets not classified as at fair value through profit or loss, including an interest in an equity accounted investee, are assessed at each reporting date to determine whether there is objective evidence of impairment.

Objective evidence that a financial asset or group of financial assets is impairment could include:

- Significant financial difficulty of the issuer or counter party;
- Breach of contract, such as a default or delinquency in interest or principal payments;  
It becoming probable that the borrower will enter bankruptcy or other financial re-organization;
- organization;

**Company Information and statement of accounting policies**

- The disappearance of an active market for that financial asset because of financial difficulties.

For an investment in an equity security, objective evidence of impairment includes a significant or prolonged decline in its fair value below its cost. The Company considers a decline of 20% to be significant or a period of nine months to be prolonged. However, in specific circumstances a smaller decline or a shorter period might have been appropriate.

**(iv) De-recognition of financial assets and financial liabilities**

The Company derecognizes a financial asset only when the contractual rights to the cash flows from the asset expires, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the Company neither transfers nor retains substantially all the risks and rewards of ownership and continues to control the transferred asset, the Company recognizes its retained interest in the asset and an associated liability for amounts it may have to pay. If the Company retains substantially all the risks and rewards of ownership of a transferred financial asset, The Company continues to recognize the financial asset and financial liability separately.

On de-recognition of a financial asset in its entirety, the difference between the asset's carrying amount and the sum of the consideration received and receivable and the cumulative gain or loss that had been recognized in other comprehensive income and accumulated in equity is recognized in profit or loss.

On de-recognition of a financial asset other than in its entirety (e.g. when the Company retains an option to repurchase part of a transferred asset), the Company allocates the previous carrying amount of the financial asset between the part it continues to recognize under continuing involvement, and the part it no longer recognizes on the basis of the relative fair values of those parts on the date of the transfer. The difference between the carrying amount allocated to the part that is no longer recognized and the sum of the consideration received for the part no longer recognized and any cumulative gain or loss allocated to it that had been recognized in other comprehensive income is recognized in profit or loss. A cumulative gain or loss that had been recognized in other comprehensive income is allocated between the part that continues to be recognized and the part that is no longer recognized on the basis of the relative fair values of those parts.

The Company derecognises a financial liability when its contractual obligations are discharged or cancelled, or expire.

Financial assets and financial liabilities are offset and the net amount presented in the statement of financial position when, and only when, the Company currently has a legally enforceable right to offset the amounts and intends either to settle them on a net basis or to realise the asset and settle the liability simultaneously.

**(f) Impairment of other non-financial assets**

At the end of each reporting period, the Company reviews the carrying amounts of its non-financial assets (other than deferred tax assets and investment property) to determine whether there is any indication of impairment. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of impairment loss (if any). When it is not possible to estimate the recoverable amount of an individual asset, the Company estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest Company of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Intangible assets with indefinite useful lives and intangible assets not yet available for use are tested for impairment at least annually, and whenever there is an indication that the asset may be impaired.

**Company information and statement of accounting policies**

Recoverable amount is the higher of fair value less costs to sell and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or cash-generating unit) is reduced to its recoverable amount. An impairment loss is recognized immediately in profit or loss, unless the relevant asset is carried at a revalued amount, in which case the impairment loss is treated as a revaluation decrease.

When an impairment loss subsequently reverses, the carrying amount of the asset (or a cash-generating unit) is increased to the revised estimate of its recoverable amount, but so that the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognized immediately in profit or loss, unless the relevant asset is carried at a revalued amount, in which case the reversal of the impairment loss is treated as a revaluation increase.

**(g) Reinsurance Assets**

The Company cedes reinsurance in the normal course of business in order to limit its net loss potential for losses arising from certain exposures. The cost of reinsurance related to long-term contracts is accounted for over the life of the underlying reinsured policies, using assumptions consistent with those used to account for these policies. However, reinsurance arrangements do not relieve the Company from its direct obligations to its policyholders.

Reinsurance assets include balances due from various reinsurance companies for ceded insurance contracts. Amounts recoverable from reinsurers are estimated in a manner consistent with the underlying reinsurance contract. Reinsurance assets are recorded in principle equal to loans and other receivables.

Reinsurance assets are assessed for impairment at each reporting date. If there is reliable objective evidence that a reinsurance asset is impaired as a result of an event that occurred after initial recognition of the reinsurance asset, that the Company may not receive all amounts due to it under the terms of the contract and the event has a reliably measurable impact on the amounts that the Company will receive from the reinsurer.

The Company gathers the objective evidence that a reinsurance asset is impaired using the same process adopted for financial assets held at amortised cost. The impairment loss is calculated and recognised following the same method used for loans and receivables.

The Company has the right to set off reinsurance payables against amounts due from reinsurers and co-assurers in line with the agreed arrangement between both parties.

**(h) Deferred acquisition costs**

The incremental costs directly attributable to the acquisition of new business which had not expired at the reporting date, are deferred by recognizing an asset. For non-life insurance contracts, acquisition costs include both incremental acquisition costs and other indirect costs of acquiring and processing new businesses.

Deferred acquisition costs are amortised in the profit or loss systematically over the life of the contracts at each reporting date.

**(i) Prepayments and other Receivables**

Prepayment are essentially prepaid rents and staff upfront payments. Other receivables are carried at amortised cost less accumulated impairment losses.

## Company information and statement of accounting policies

Other receivables balances include dividend receivable, intercompany receivables, accrued rental income and security holding trust account.

Intercompany receivables consist of receivables from the parent company, Royal Exchange Plc and other components within the Royal Exchange group. The Company recognises intercompany receivables when they are originated. Intercompany receivables are measured at amortised cost less accumulated losses.

### (j) Investment in associates (equity-accounted investees)

Associates are those entities in which the Company has significant influence, but not control, over the financial and operating policies. Significant influence is primarily presumed to exist when the Company holds between 20% and 50% of the voting power of another entity. However, where other factors are involved, these are taken into consideration in exercising judgment.

Investments in associates are accounted for using the equity method of accounting. Under the equity method, the investment is initially recognised at cost, and the carrying amount is increased or decreased to recognise the investor's share of the profit or loss of the investee after the date of acquisition.

If the ownership interest in an associate is reduced but significant influence is retained, only a proportionate share of the amounts previously recognised in other comprehensive income is reclassified to profit or loss where appropriate.

The Company's share of post-acquisition profit or loss is recognised in the income statement; its share of post-acquisition movements in other comprehensive income is recognised in other comprehensive income, with a corresponding adjustment to the amount of the investment. When the Company's share of losses in an associate equals or exceeds its interest in the associate, including any other unsecured receivables, the Company does not recognise further losses, unless it has incurred legal or constructive obligations or made payments on behalf of the associate.

The Company determines at each reporting date whether there is any objective evidence that the investment in the associate is impaired. If this is the case, the Company calculates the amount of impairment as the difference between the recoverable amount of the associate and its carrying value, and recognises the impairment amount in the income statement.

### (k) Investment Properties

Investment properties are properties held for long-term rental yields or for capital appreciation (including property under construction for such purposes) or for both purposes, but not for sale in the ordinary course of business.

#### Recognition and measurement

Recognition of investment properties takes place only when it is probable that the future economic benefits that are associated with the investment property will flow to the entity and the cost can be measured reliably.

Investment properties are measured initially at fair value, including all transaction costs.

Subsequent to initial recognition, investment properties are measured at fair value, which reflects market conditions at the reporting date. Gains or losses arising from changes in the fair value of investment properties are included in the statement of profit or loss in the period in which they arise. Fair values are evaluated and assessed annually by an external valuer who is accredited by the Financial Reporting Council of Nigeria.

**Company information and statement of accounting policies**

**De-recognition**

An investment property is derecognized upon disposal or when the investment property is permanently withdrawn from use and no future economic benefits are expected from the disposal.

Any gain or loss arising on de-recognition of the property (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is recognized in the profit or loss in the period of de-recognition.

**Transfers**

Transfers are made to or from investment property only when there is a change in use. For a transfer from investment property to owner occupied property, the deemed cost for subsequent accounting is the fair value at the date of change. If owner-occupied property becomes an investment property, the Company accounts for such property in accordance with the policy stated under property and equipment up to the date of change. Subsequently, the property is re-measured to fair value and reclassified as investment property.

**(I) Property and Equipment**

**Recognition and measurement**

All property and equipment used by the Company is stated at historical cost less accumulated depreciation and any accumulated impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items. If significant parts of a property and equipment have different useful lives, then they are accounted for as separate items (major components) of property and equipment.

**Subsequent costs**

Subsequent expenditures are recognized in the carrying amount of the asset or as a separate asset as appropriate if it is probable that the future economic benefits embodied within the part will flow to the Company and its cost can be reliably measured. The costs of the day-to-day servicing of property and equipment are recognized in the statement of profit or loss as incurred.

**Depreciation**

Depreciation is recognized so as to allocate the cost of assets (other than freehold land) less their residual values over their useful lives, using the straight-line method. The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis. Assets held under finance leases are depreciated over their expected useful lives on the same basis as owned assets. However, when there is no reasonable certainty that ownership will be obtained by the end of the lease term, assets are depreciated over the shorter of the lease term and their useful lives.

Freehold and leasehold land is not depreciated

The estimated useful lives of property and equipment are as follows:

Buildings	50years
Generating set	7years
Computer equipment	4 years
Furniture and office equipment	5 years
Motor vehicles - New (Cash purchase)	4 years
Motor vehicles – Salvage	3 years
Finance lease assets	4 years

Depreciation methods useful lives and residual values are reviewed at each reporting date and adjusted if appropriate.

**Company information and statement of accounting policies**

***De-recognition***

An item of property, plant and equipment is derecognized upon disposal or when no future economic benefits are expected to arise from the continued use of the asset.

Any gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognized in the statement of profit or loss of the year that the asset is de-recognized.

**(m) Intangible Assets**

***Acquired computer software***

Acquired computer software licenses are capitalized on the basis of the costs incurred to acquire and bring to use the specific software. Computer software is stated at cost less amortization and impairment losses. Subsequent expenditure is capitalized only when it increases the future economic benefits embodied in the specific asset to which it relates. Costs associated with maintaining computer software programmes are recognized as an expense as incurred.

***Amortization***

Computer software costs, whether developed or acquired, are amortized for a period of five years using the straight line method.

Intangible assets which are not available for use are tested for impairment annually. Amortisation methods, useful lives and residual values are reviewed at each reporting date and adjusted if appropriate

An intangible asset shall be derecognized by the Company on disposal; or when no future economic benefit are expected from its use or disposal. Any gain or loss arising on de-recognition of the assets (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is included in profit or loss in the period the asset is recognised.

**(n) Income Taxes**

Income tax expense comprises current and deferred tax. Income tax expense is recognized in the statement of profit or loss except to the extent that it relates to items recognized in other comprehensive income or directly in equity. In this case, the tax is also recognized in other comprehensive income or directly in equity, respectively.

The tax currently payable is based on taxable profit for the year. Taxable profit differs from profit as reported in the Company's statement of profit or loss because of items of income or expense that are taxable or deductible in other years and items that are never taxable or deductible. The Company's liability for current tax is calculated using tax rates that have been enacted by the end of the reporting period.

The current taxes include: Company Income Tax at 30% of taxable profit; Education Tax at 2% of assessable profit; Capital Gain Tax at 10% of chargeable gains; and Information Technology Development levy at 1% of accounting profit.

***Deferred tax***

Deferred tax is recognized on temporary differences between the carrying amounts of assets and liabilities in the Company's financial statements and the corresponding tax bases used in the computation of taxable profit.

**Company information and statement of accounting policies**

Deferred tax liabilities are generally recognized for all taxable temporary differences. Deferred tax assets are generally recognized for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilized. Such deferred tax assets and liabilities are not recognized if the temporary difference arises from goodwill (arising in a business combination) or from the initial recognition (other than in a business combination) of other assets and liabilities in a transaction that affects neither the taxable profit nor the accounting profit.

The carrying amount of deferred tax assets is reviewed at the end of each reporting period and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered.

Deferred tax liabilities and assets are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset realized, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period. The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Company expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

For the purposes of measuring deferred tax liabilities and deferred tax assets for properties held for sale that are measured using the fair value model, the carrying amount of such properties are presumed to be recovered entirely through the sale unless the presumption is rebutted. The presumption is rebutted when the investment property is depreciable and is held within a business model whose objective is to consume substantially all the economic benefits embodied in the investment property over time, rather than through sale.

**(o) Statutory Deposits**

Statutory deposits are cash balances held with the Central Bank of Nigeria (CBN) in compliance with the Insurance Act, CAP 117, LFN 2004 for the general insurance companies.

The deposits are only available as a last resort to the Company if it goes into liquidation. Statutory deposits are measured at cost.

**(p) Hypothecation of Assets**

The Company structured its assets to meet the requirements of the Insurance Act 2003 wherein the policyholders' assets and funds are not co-mingled with assets and funds that belong to shareholders and other funds.

In particular, investment properties, investment securities (equities and fixed income securities) and insurance funds hypothecated to policyholders are distinguished from those owned by the shareholders.

The assets hypothecated are shown in Note 23(f) to the financial statements.

**(q) Borrowings**

Borrowings by way of bank overdrafts that are repayable on demand and form an integral part of the Company's cash management are included as a component of cash and cash equivalents for the purpose of the statement of cash flows.

Borrowing costs comprise interest payable on loans and bank overdrafts. They are charged to profit or loss as incurred, except those that relate to qualifying assets. Arrangement fees in respect of financing arrangements are charged to borrowing costs over the life of the related facility.

**Company information and statement of accounting policies**

**(r) Deferred income**

Deferred income comprises deferred rental income and deferred commission.

Deferred Rental Income relates to rents received in advance. These are amortized and transferred to the statement of profit or loss over the periods that they relate.

Deferred commission income relates to commissions received on ceded reinsurance businesses but not yet earned as at reporting date. Deferred commission incomes are amortized systematically over the life of the contracts at each reporting date.

**(s) Provisions, contingent liabilities and assets**

**Provisions**

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that the Company will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation.

The amount recognized as a provision is the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (when the effect of the time value of money is material).

A contingent liabilities is a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future not wholly within the control of the Company or the Company has a present obligation as a result of a past event. It is not recognized because it is not likely that an outflow of resources will be required to settle the obligation or the amount cannot be reliably estimated. Contingent liabilities normally comprise of legal claims under arbitration or court process in respect of which a liability is not likely to occur.

**(t) Finance and operating lease obligations**

These are the corresponding liabilities on assets acquired under finance lease. Lease payments are apportioned between finance expenses and reduction of the lease obligation so as to achieve a constant rate of interest on the remaining balance of the liability. Finance expenses are recognized in the year which they relate in profit or loss.

**Lease assets - lessee**

Assets held by the Company under leases that transfer to the Company substantially all of the risks and rewards of ownership are classified as finance leases. The leased asset is initially measured at an amount equal to the lower of its fair value and the present value of the minimum lease payments. Subsequent to initial recognition, the asset is accounted for in accordance with the accounting policy applicable to that asset.

Assets held under other leases are classified as operating leases.

**Lease payments**

Payments made under operating leases are recognised in profit or loss on a straight-line basis over the term of the lease. Lease incentives received are recognised as an integral part of the total lease expense, over the term of the lease.

**Lease assets - lessor**

If the Company is the lessor in a lease agreement that transfers substantially all of the risks and rewards incidental to ownership of the asset to the lessee, then the arrangement is classified as a finance lease and a receivable equal to the net investment in the lease is recognised and presented within loans and advances

Company information and statement of accounting policies

(u) Insurance Liabilities

(i) Classification

IFRS 4 requires contracts written by insurers to be classified as either 'insurance contracts' or 'investment contracts' depending on the level of insurance risk transferred.

Insurance contracts are those contracts when the insurer has accepted significant insurance risk from another party (the policyholders) by agreeing to compensate the policyholders if a specified uncertain future event (the insured event) adversely affects the policyholders.

The Company only enters into insurance contracts. Therefore, its insurance contract liabilities represent the Company's liability to the policy holders. It comprises the unearned premium, unexpired risk, outstanding claims and the incurred but not reported claims. At the end of each accounting period, this liability is reflected as determined by the actuarial valuation report.

**Unearned premium provision**

The provision for unearned premiums represents the proportion of premiums written in the periods up to the accounting date that relate to the unexpired terms of policies in force at the end of the reporting date. This is estimated to be earned in subsequent financial periods, computed separately for each insurance contract using a time apportionment basis.

**Reserve for unexpired risk**

A provision for additional unexpired risk reserve is recognised for an underwriting year where it is envisaged that the estimated cost of claims and expenses exceed the unearned premium provision.

**Reserve for outstanding claims**

Outstanding claims represent the estimated ultimate cost of settling all claims arising from incidents occurring prior to the end of reporting date, but not settled at that date.

Reserve for incurred but not reported claims (IBNR)

A provision is made for claims incurred but not yet reported as at the end of the financial year. This provision is based on the liability adequacy test report.

**Liability Adequacy Test**

At the end of each reporting period, liability adequacy tests are performed to ensure that material and reasonably foreseeable losses arising from existing contractual obligations are recognised. In performing these tests, current best estimates of future contractual cash flows, claims handling and administration expenses, investment income backing such liabilities are considered. Long-term insurance contracts are measured based on assumptions set out at the inception of the contract. Any deficiency is recognized in profit or loss by increasing the carrying amount of the related insurance liabilities.

The Liability Adequacy Test (LAT) was carried out by Ernst & Young (Consultant Actuaries) under the supervision of Mr. O. O. Okpaise with FRC number (FRC/2012/NAS/00000000738).

(ii) Recognition and Measurement of Insurance Contract

**Premium**

Gross written premiums for general insurance contracts comprise premiums received in cash as well as premiums that have been received and confirmed as being held on behalf of the Company by insurance brokers and duly certified thereto. Gross premiums are stated gross of commissions and taxes payable and stamp duties that are payable to intermediaries and relevant regulatory bodies respectively.

Unearned premiums represent the proportions of premiums written in the year that relate to the unexpired risk of policies in force at the reporting date.

Company information and statement of accounting policies

**Reinsurance**

Premiums, losses and other amounts relating to reinsurance treaties are measured over the period from inception of a treaty to expiration of the related business. The actual profit or loss on reinsurance business is therefore not recognized at the inception but as such profit or loss emerges. In particular, any initial reinsurance commissions are recognized on the same basis as the acquisition costs incurred.

Premiums ceded, claims recovered and commission received are presented in the statement of profit or loss and statement of financial position separately from the gross amounts.

**Claims**

Claims incurred comprise claims and claims handling expenses paid during the financial year and changes in the provision for outstanding claims. Claims and claims handling expenses are recognized in profit or loss as incurred.

**(v) Employee Benefits**

**(i) Short-term benefits**

Staff benefits such as wages, salaries, paid annual leave allowance, and non-monetary benefits are recognized as employee benefit expenses. The expenses are accrued when the associated services are rendered by the employees of the Company.

Short-term employee benefit obligations are measured on an undiscounted basis and are expensed as the related service is provided.

**(ii) Defined Contribution Plans**

The Company operates a defined contribution plan in accordance with the provisions of the Pension Reform Act 2014. The Company contributes 10% and employees contribute 8% each of the qualifying monthly emoluments in line with the Pension Reform Act.

The Company's monthly contribution to the plan is recognized as an expense in profit or loss.

The Company pays contributions to privately administered pension fund administration on a monthly basis. The Company has no further payment obligation once the contributions have been paid. Prepaid contributions are recognized as an asset to the extent that a cash refund or reduction in the future payments is available. Payments to defined contribution retirement benefit plans are recognised as an expense when employees have rendered service entitling them to the contributions.

**(iii) Termination Benefits**

Termination benefits are payable when employment is terminated before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. The Company recognizes termination benefits when it is demonstrably committed to either: terminating the employment of current employees according to a detailed formal plan without possibility of withdrawal; or providing termination benefits as a result of an offer made to encourage voluntary redundancy.

**(a) Defined Benefit Plan**

Remeasurements of the net defined benefit liability, which comprise actuarial gains and losses, are recognised immediately in OCI. The Company determines the net interest expense (income) on the defined benefit liability for the period by applying the discount rate used to measure the defined benefit obligation at the beginning of the annual period to the then-net defined benefit liability, taking into account any changes in the net defined benefit liability during the period as a result of benefit payments. Net interest expense and other expenses related to defined benefit plans are recognised in profit or loss.

**Company information and statement of accounting policies**

**(b) Pension**

The Company operated a funded pension scheme for its employees prior to the Pension Reform Act 2004. It therefore has continuing pension obligation to its staff who retired prior to the commencement of the contributory pension scheme.

Pensioners are entitled to 3% annual increment. Over 90% of the pension assets are being managed by a pension fund administrator while the balance is invested in marketable securities and bank placement.

The calculation of defined benefit obligations is performed annually by a qualified actuary using the projected unit credit method. When the calculation results in a potential asset for the Company, the recognised asset is limited to the present value of economic benefits available in the form of any future refunds from the plan or reductions in future contributions to the plan. To calculate the present value of economic benefits, consideration is given to any applicable minimum funding requirements.

Remeasurements of the net defined benefit liability, which comprise actuarial gains and losses, the return on plan assets (excluding interest) and the effect of the asset ceiling (if any, excluding interest), are recognised immediately in OCI. The Company determines the net interest expense (income) on the net defined benefit liability (asset) for the period by applying the discount rate used to measure the defined benefit obligation at the beginning of the annual period to the then-net defined benefit liability (asset), taking into account any changes in the net defined benefit liability (asset) during the period as a result of contributions and benefit payments. Net interest expense and other expenses related to defined benefit plans are recognised in profit or loss.

When the benefits of a plan are changed or when a plan is curtailed, the resulting change in benefit that relates to past service or the gain or loss on curtailment is recognised immediately in profit or loss. The Company recognises gains and losses on the settlement of a defined benefit plan when the settlement occurs.

**(c) Other Long term benefits**

The Company operates a long service award plan for eligible staff who have rendered continued service to the organization.

Benefits accrue after a minimum of 10 years and a maximum of 35 years. The main benefits payable on the scheme are both cash and gift items which vary according to the number of years of service.

The liability is valued annually by a qualified actuary (Logic Professional Services) under the supervision of Mr. Ganiu Shefiu with FRC number (FRC/2017/NAS/00000017548) using the projected unit credit method.

Remeasurements of the obligation, which comprise actuarial gains or losses, are recognized immediately in OCI. The Company determines the net interest expense (income) on the obligation for the period by applying the discount rate used to measure the obligation at the beginning of the annual period to the liability taking into account any changes in the liability during the period as a result of benefit payments. Net interest expense and other expenses related to obligation are recognized in profit or loss.

The Company meets benefits on a pay-as-you-qualify basis as the plan is an unfunded scheme.

Company information and statement of accounting policies

**(w) Capital and Reserves**

**(i) Share capital**

The equity instruments issued by the Company are classified as equity in accordance with the substance of the contractual arrangements and the definitions of an equity instrument.

Equity instruments issued by the Company are recognized as the proceeds are received, net of direct issue costs. Repurchase of the Company's own equity instruments is recognized and deducted directly in equity. No gain or loss is recognized in profit or loss on the purchase, sale, issue or cancellation of the Company's own equity instruments.

**(ii) Share premium**

This represents the excess amount paid by shareholders on the nominal value of the shares. This amount can be utilized as provided in Section 120(3) of Companies Allied Matters Act. The share premium is classified as an equity instrument in the statement of financial position.

**(iii) Contingency reserve**

The Company maintains Contingency reserves for the general business in accordance with the provisions of S.21 (1) of the Insurance Act 2003.

In compliance with the regulatory requirements in respect of Contingency Reserve for general business, the Company maintains contingency reserve at the rate equal to the higher of 3% of gross premium or 20% of the total profit after taxation until the reserve reaches the greater of minimum paid up capital or 50% of net premium.

**(iv) Retained Earnings**

The reserve comprises undistributed profit/ (loss) from previous years and the current year. Retained Earnings is classified as part of equity in the statement of financial position.

**(v) Fair value reserves**

Fair value reserves represent the cumulative net change in the fair value of available-for-sale financial assets at the reporting date.

**(vi) Asset revaluation reserve**

The revaluation reserve relates to the surplus on revaluation of land and building at the end of the financial period. Increases in the value of these assets are recognised in other comprehensive income and accumulated in assets revaluation reserve until the assets are derecognised.

**(vii) Other reserves - employee benefit actuarial surplus**

Actuarial (surplus)/deficit on employee benefits represent changes in benefit obligation due to changes in actuarial valuation assumptions or actual experience differing from experience. The gains/losses for the year, net of applicable deferred tax asset/liability on employee benefit obligation, are recognized in other comprehensive income.

**(viii) Dividends on ordinary shares**

Dividends on ordinary shares are recognised in equity in the period in which they are approved by the Company's shareholders. Dividends for the year that are declared after the end of the reporting period are dealt with in the subsequent period.

Dividends proposed by the Directors but not yet approved by shareholders are disclosed in the financial statements in accordance with the requirements of the Company and Allied Matters Act of Nigeria.

Company information and statement of accounting policies

(x) Revenue Recognition

(i) Gross Written Premium

Gross written premiums for non-life (general) insurance comprise premiums received in cash as well as premiums that have been received and confirmed as being held on behalf of the Company by insurance brokers and duly certified thereto. Gross written premiums are stated gross of commissions, net of taxes and stamp duties that are payable to intermediaries and relevant regulatory bodies respectively.

Unearned premiums represent the proportions of premiums written in the year that relate to the unexpired risk of policies in force at the reporting date.

(ii) Reinsurance expenses

Reinsurance cost represents outward premium paid/payable to reinsurance companies less the unexpired portion as at the end of the financial year.

(iii) Fees and commission income

Fees and commission income consists primarily of insurance agency and brokerage commission, reinsurance and profit commissions, policyholder administration fees and other contract fees. Reinsurance commissions receivable are deferred in the same way as acquisition costs. All other fee and commission income is recognized as the services are provided.

(iv) Investment Income

Investment income consists of dividends and interest income on loans and receivables, realized gains and losses as well as unrealized gains and losses on fair value assets.

(v) Interest income

Interest income is recognized in the profit or loss as it accrues and is calculated by using the effective interest rate method. Fees and commissions that are an integral part of the effective yield of the financial asset or liability are recognized as an adjustment to the effective interest rate of the instrument.

The effective interest method is a method of calculating the amortised cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Company estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts. Where the estimated cash flows on financial assets are subsequently revised, other than impairment losses, the carrying amount of the financial assets is adjusted to reflect actual and revised estimated cash flows.

Once a financial asset or a group of similar financial assets has been written down as a result of an impairment loss, interest income is recognised using the rate of interest used to discount the future cash flows for the purpose of measuring the impairment loss.

(vi) Dividend income

Dividend income from investments is recognized when the shareholders' rights to receive payment have been established.

**Company information and statement of accounting policies**

**(vii) Realized and Unrealized gains and losses**

Realized gains and losses on investments include gains and losses on financial assets and investment properties. Gains and losses on the sale of investments are calculated as the difference between net sales proceeds and the carrying value as recorded on occurrence of the sale transaction.

Unrealized gains or losses represent the difference between the carrying value at the year end and the carrying value at the previous year end or purchase value during the year, less the reversal of previously recognized unrealized gains and losses in respect of disposals during the year.

**(vii) Other operating income**

Other operating income represents income generated from sources other than premium revenue and investment income. It includes rental income, profit on disposal of fixed assets. Rental income is recognized on an accrual basis.

**(y) Expense Recognition**

**(i) Insurance claims and benefits incurred**

Gross benefits and claims consist of benefits and claims paid / payable to policyholders, which include changes in the gross valuation of insurance contract liabilities, except for gross change in the unearned premium provision which are recorded in premium income. It further includes internal and external claims handling costs that are directly related to the processing and settlement of claims. Amounts receivable in respect of salvage and subrogation are also considered.

**Salvage**

Some non-life insurance contracts permit the Company to sell (usually damaged) property acquired in the process of settling a claim.

**Subrogation**

Subrogation is the right of an insurer to pursue a third party that caused an insurance loss to the insured. This is done as a means of receiving the amount of the claim paid to the insured for the loss.

**(ii) Underwriting expenses**

Underwriting expense include acquisition costs and maintenance expense. Acquisition costs comprise direct and indirect costs associated with the writing of insurance contracts. These include commission expenses and other technical expenses. Maintenance expenses are expenses incurred in servicing existing policies and clients. All underwriting expenses are charged to income statement as they accrue or become payable.

**(iii) Management expenses**

Management expenses are charged to profit or loss when goods are received or services rendered. They are expenses other than claims, maintenance and underwriting expenses and include employee benefits, depreciation charges and other operating expenses.

Company information and statement of accounting policies

**4 Significant accounting estimates and judgements**

The preparation of financial statements requires the use of accounting estimates which, by definition, will seldom equal the actual results. Management also needs to exercise judgement in applying the company's accounting policies.

This note provides an overview of the areas that involve a higher degree of judgement or complexity, and major sources of estimation uncertainty that have a significant risk of resulting in a material adjustment within the next financial year. Detailed information about each of these estimates and judgements is included in the related notes together with information about the basis of calculation for each affected line item in the financial statements.

**A Measurement of the expected credit loss allowance**

The measurement of the expected credit loss allowance for the company's financial assets measured at amortised cost is an area that requires the use of complex models and significant assumptions about future economic conditions and credit behaviour (e.g. the likelihood of customers defaulting and the resulting losses).

A number of significant judgements are also required in applying the accounting requirements for measuring ECL, such as:

- Determining criteria for significant increase in credit risk;
- Choosing appropriate models and assumptions for the measurement of ECL;
- Establishing the number and relative weightings of forward-looking scenarios for each type of product/market and the associated ECL; and
- Establishing entity's of similar financial assets for the purposes of measuring ECL.

**B Judgements**

Management applies its judgement to determine whether the Company should equity account for its' investment in associates. According to IAS 28, a 20% or more interest in an investee leads to a rebuttable presumption that the investor has significant influence over the investee.

The Company holds a direct interest of 26% in CBC EMEA and 33% in Royal Exchange Healthcare (REHL). Management has considered the fact and circumstances, including the representation of the Company on the board of CBC EMEA and REHL and has concluded that the Company has significant influence over CBC EMEA and REHL and the entities are associates of the Company.

**C Assumptions and estimation uncertainties**

Information about assumptions and estimation uncertainties that have a significant risk of resulting in a material adjustment in the year ending 31 December 2020 is set out below in relation to the impairment of financial instruments and in the following notes in relation to other areas:

**(i) Liabilities arising from insurance contracts**

*Claims arising from non-life insurance contracts*

Liabilities for unpaid claims are estimated on case by case basis. The liabilities recognised for claims fluctuate based on the nature and severity of the claim reported. Claims incurred but not reported are determined using statistical analyses and the Company deems liabilities reported as adequate. Assumptions used in determining the liabilities are disclosed in Note 47.

Changes in the outcome of the assumption can have a significant impact on the total recorded liabilities arising from insurance contracts and the claims expenses.

Company information and statement of accounting policies

(iii) **Fair value of financial instruments**

The directors use their judgment in selecting an appropriate valuation technique for some financial assets.

Impairment for financial assets carried at amortized costs as well as the amount of impairment for trade receivables. The significant estimates applied in determination of fair value of financial assets are as shown in the statement of accounting policies note 3 (c)(v).

(iv) **Determination of fair value of investment property**

Management employed the services of estate surveyors and valuers to value its investment properties. The estimated open market value is deemed to be the fair value based on the assumptions that there will be willing buyers and sellers. Recent market prices of neighborhood properties were also considered in deriving the open market values. Other key assumptions are as disclosed in Note 13 to the financial statements.

(v) **Defined benefit plan**

The present value of the employee benefit obligations depends on a number of factors that are determined in an actuarial basis using a number of assumptions. Any changes in these assumptions will impact the carrying amount of obligations. The assumptions used in determining the net cost (income) for pensions include the discount rate.

The Company determines the appropriate discount rate at the end of the reporting period. In determining the appropriate discount rate, reference is made to the yield on Nigerian Government Bonds that have maturity dates approximating the terms of the related pension liability. Other key assumptions for pension obligations are based in part on current market conditions as disclosed in Note 17.

(vi) **Current income tax**

The current income tax charge is calculated on taxable income on the basis of the tax laws enacted or substantively enacted at the reporting date. The Company applies general tax rules and the Directors have adopted current tax practices in computing the tax liabilities. Actual results may differ from these estimates based on the interpretation by the tax authorities. The Directors acknowledge that changes in the application of the current tax practices can have a significant impact on the tax expense and tax liabilities recorded in the financial statements.

(vii) **Deferred tax assets**

Recognised deferred tax assets (See note 18) are measured at the tax rates enacted or substantively enacted at the end of the reporting period and represents those amounts that are probable of realisation taking into account management's estimates of future taxable profits. In determining estimates of future taxable profit against which deductible amount can be utilised, management has considered the existence of taxable temporary differences that will reverse in the same year that deductible amounts will reverse. Management's estimate of future taxable profits has been determined on the basis of a five year profit forecast. Management affirms that assumptions underlying the five year forecast is reasonable given the Company's restructured operations and there are no objective indicators to suggest that the projected earnings level will not be achieved.

(viii) **Determination of impairment of property and equipment, and intangible assets excluding goodwill**

Management is required to make judgements concerning the cause, timing and amount of impairment. In the identification of impairment indicators, management considers the impact of changes in current competitive conditions, cost of capital, availability of funding, technological obsolescence, discontinuance of services and other circumstances that could indicate that impairment exists. The Company applies the impairment assessment to its separate cash generating units.

**Company information and statement of accounting policies**

This requires management to make significant judgements and estimates concerning the existence of impairment indicators, separate cash generating units, remaining useful lives of assets, projected cash flows and net realisable values. Management's judgement is also required when assessing whether a previously recognised impairment loss should be reversed.

**(ix) *Depreciation and carrying value of property and equipment and intangible assets***

The estimation of the useful lives of assets is based on management's judgement. Any material adjustment to the estimated useful lives of items of the assets will have an impact on the carrying value of these items. Depreciation and amortisation is recognised on the basis described in accounting policies note 3(l) and 3(m)

<b>Cash and cash equivalents, end of year</b>	<b>6</b>	<b>9,745,199</b>	<b>10,590,429</b>

## Notes to the financial statements

### 5 Financial risk management

Factors relating to general economic conditions, such as consumer spending, business investment, government spending, the volatility and strength of both debt and equity markets, and inflation, all affect the profitability of businesses in Nigeria.

In a sustained economic phase of low growth, characterized by higher unemployment, lower household income, lower corporate earnings, lower business investment and lower consumer spending, the demand for financial and insurance products could be adversely affected.

The Company's risk management process includes the identification and measurement of various forms of risk, the establishment of risk thresholds and the creation of processes intended to maintain risks within these thresholds while optimizing returns on the underlying assets and minimizing costs associated with liabilities. Risk range limits are established for each type of risk, and are approved by the Board's Investment Committee and subject to ongoing review.

The Company's risk management strategy is an integral part of managing the Company's core businesses, and utilizes a variety of risk management tools and techniques such as:

- Measures of price sensitivity to market changes (e.g., interest rate and foreign exchange rate);
- Asset/Liability management;
- Periodic Internal Audit and Control, and;
- Risk management governance, including risk oversight committee, policies and guidelines, and approval limits.

In addition, the company monitors and manages the financial risks relating to the operations of the organization through internal risk reports which analyse exposures by degree and magnitude of risks. These risks include market risk (currency risk, interest rate risk and price risk), credit risk and liquidity risk.

#### (a) Financial asset valuation bases

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or, in its absence, the most advantageous market to which the Company has access at that date. Fair values are determined at prices quoted in active markets. In our environment, such price information is typically not available for all instruments measured at fair value and the company applies valuation techniques to measure such instruments. These valuation techniques make maximum use of market observable data but in some cases management estimate other than observable market inputs are used within the valuation model. There is no standard model and different assumptions could generate different results.

Fair values are subject to a control framework designed to ensure that input variables and output are assessed independent of the risk taker. The Company has minimal exposure to financial assets which are valued at other than quoted prices in an active market.

#### Fair value hierarchy

IFRS 7 specifies a hierarchy of valuation techniques based on whether the inputs to those valuation techniques are observable or unobservable. Observable input reflect market data obtained from independent sources; unobservable inputs reflect the company's market assumptions. These two types of inputs have created the following fair value hierarchy:

**Level 1** - Quoted prices (unadjusted) in active markets for identical assets or liabilities. This level includes listed equity securities and debt instruments on exchanges.

Notes to the financial statements

**Level 2** - Valuation techniques based on observable inputs. This category includes instruments valued using: quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.

**Level 3** - This includes financial instruments, the valuation of which incorporate significant inputs for the asset or liability that is not based on observable market data (unobservable inputs). Unobservable inputs are those not readily available in an active market due to market illiquidity or complexity of the product. These inputs are generally determined based on inputs of a similar nature, historic observations on the level of the input or analytical techniques.

This hierarchy requires the use of observable market data when available. The Company considers relevant and observable market prices in its valuations where possible.

The following table provides an analysis of financial instruments that are measured subsequent to initial recognition at fair value, analysed into Levels 1 to 3 based on the degree to which the fair value is observable.

31 December 2020		Level 1 N'000	Level 2 N'000	Level 3 N'000	Total N'000
<b>Financial Assets:</b>					
<b>Fair value through profit or loss:-</b>

<b>Total financial assets measured at fair value</b>		824,427	-	-	824,427

Notes to the financial statements

**Financial instruments not measured at fair value**

The fair value information for financial assets and financial liabilities not measured at fair value has not been disclosed because their carrying amount is a reasonable approximation of its fair value.

**The financial assets and liabilities include:**

**Cash and cash equivalents**

Cash and cash equivalents consists of cash on hand and current balances with banks.

The carrying amounts of current balances with banks is a reasonable approximation of fair value which is the amount receivable on demand.

**Financial assets at amortised cost**

The estimated value amounts to ₦93.8million. Financial assets at amortised cost consists of placements with financial institutions and staff mortgage loans.

**Trade receivables and other receivables**

The carrying amounts of trade receivables and other receivables are receivable in less than one year, are reasonable approximation of their fair values.

**Bank overdrafts, trade payables, provision and other payables and finance lease obligations**

The carrying amounts of bank borrowings, trade payables, provision and other payables and finance lease obligations are reasonable approximation of their fair values which are repayable on demand.

(b) **Financial risks**

The Company is exposed to the following categories of risks:

- i) Market risk
- ii) Credit risk
- iii) Liquidity risk

(i) **Market risk**

This reflects the possibility that the value of the investments will fall as a result of changes in market conditions, whether those changes are caused by factors specific to the individual investment or factors affecting all investments traded in the market. The Company is exposed to this risk through its financial assets and comprises currency risk, interest rate risk and price risk.

**Currency risk**

This is the risk that the carrying of financial instruments may be affected by changes in foreign exchange rates.

The Company seeks to manage its exposures to risk through control techniques which ensure that the residual risk exposures are within acceptable tolerances agreed by the Board. A description of the risks associated with the Company's principal products and the associated control techniques is detailed below.

**Foreign Currency risk**

The Company accepts receipt of premiums in foreign currency, in addition to Naira, as a result, the Company is exposed to risk as exchange rates fluctuate. The Company also has bank balances denominated in foreign currency.

The Company has minimal exposure to currency risk as the Company's financial assets are primarily matched to the same currencies as its insurance and investment contract liabilities. However, foreign exchange risk arises from other recognized assets and liabilities denominated in other currencies.

## Notes to the financial statements

The carrying amounts of the Company's foreign currency denominated assets and liabilities are as follows:

### 31 December 2020

	Pounds sterling N'000	Euro N'000	US Dollars N'000	Total N'000
Assets (Cash & Cash Equivalent)	-	40,963	8,445,820	8,486,783
Liabilities	-	-	(7,417,516)	(7,417,516)
	-	40,963	1,028,304	1,069,267

### 31 December 2019

	Pounds sterling N'000	Euro N'000	US Dollars N'000	Total N'000
Assets (Cash & Cash Equivalents)	-	34,233	5,866,031	5,900,264
Liabilities	-	-	(5,775,254)	(5,775,254)
	-	34,233	90,777	125,010

### Foreign currency sensitivity analysis

The following table details the Company's sensitivity to a 10% increase and decrease in foreign currency rates against the Naira. A 10% sensitivity rate is used when reporting foreign currency risk internally to key management personnel and represents management's assessment of the reasonably possible change in foreign exchange rates. For each sensitivity scenario, the impact of change in a single factor is shown, with other assumptions or variables held constant.

The following tables show the effect on the profit before tax as at 31 December 2020 from N N477.34/€, and N400.33/\$ closing rate. These closing rates for the USD were determined from the Nigeria Autonomous Foreign Exchange Fixing (NAFEX) rate as at 31 December 2020.

### 31 December 2020

	Pounds sterling N'000	Euro N'000	US Dollars N'000	Total N'000
10% increase	-	4,096	102,830	106,927
10% decrease	-	(4,096)	(102,830)	(106,927)
<b>Impact of increase on:</b>				
Pre-tax Profit	-	-	-	1,131,026
Shareholders' Equity	-	-	-	10,334,055
<b>Impact of decrease on:</b>				
Pre-tax Profit	-	-	-	917,173

The tax impact of foreign exchange results is generally 30% of the result. This is not included in the impact on shareholders equity as the final impact will depend on the tax status of the Company when it realises the impact of the foreign exchange results for tax purposes.

Notes to the financial statements

31 December 2019

	Pounds sterling N'000	Euro N'000	US Dollars N'000	Total N'000
10% increase	-	3,423	9,077	12,500
10% decrease	-	(3,423)	(9,077)	(12,500)
<b>Impact of increase on:</b>				
Pre-tax (loss)/profit	-	-	-	465,239
Shareholders' Equity	-	-	-	6,786,357
Shareholders' Equity	-	-	-	9,102,518
<b>Impact of decrease on:</b>				
Pre-tax Profit	-	-	-	1,484,047

The tax impact of foreign exchange results is generally 30% of the result. This is not included in the impact on shareholders equity as the final impact will depend on the tax status of the Company when it realises the impact of the foreign exchange results for tax purposes.

**Interest Rates Risk**

The Company's exposure to interest rate risk relates primarily to the market price and cash flow variability of assets and liabilities associated with changes in interest rates.

Insurance liabilities and employee benefits do not form part of this profile. Although they are significant liabilities subject to interest rate risk, they are not financial instruments within the scope of IFRS 7.

Changes in interest rates result to reduction in income 'spread' or the difference between the amounts that the Company is required to pay under the contracts and the rate of return the Company is able to earn on investments intended to support obligations under the contracts. Investment spread is, arguably, one of the key components of the net income of insurers.

The Company's mitigation efforts with respect to interest rate risk are primarily focused on maintaining an investment portfolio with diversified maturities that has a weighted average duration or tenor approximately equal to the duration of our liability cash flow profile.

Also, the Company manages this risk by adopting close asset/liability matching criteria, to minimize the impact of mismatches between asset and liability values arising from interest rate movements.

Furthermore, the Company uses sensitivity analytics to measure the impact of interest rate changes and movements on the value of our financial assets scenarios.

## Notes to the financial statements

The Company is exposed to interest rate risk as it invests in fixed income and money market instruments.

### Interest rate profile

At the end of the reporting period the interest rate profile of the Company's interest bearing financial instruments as reported to the Management of the Company are stated below.

Financial instruments	Notes	31-Dec-20 N'000	31-Dec-19 N'000
<i>Fixed interest rate instruments:</i>			
Cash and Cash equivalents	6	9,112,721	9,367,071
Federal government bonds	7(b)	3,563,512	114,886
Treasury bills	7(b)	193,500	43,365
Placements	7(c)	-	7,226
Statutory deposits	16	340,000	340,000
Mortgage loans	7(c)	98,614	42,327
Finance lease obligations	22(a)	(55,703)	(63,927)
Bank overdrafts	6	(32,699)	(29,030)
		<b>13,219,945</b>	<b>11,370,113</b>

### Others:

#### Interest rate sensitivity analysis

The sensitivity analyses below have been determined based on the exposure to interest rates for both derivative and non-derivative instruments at the balance sheet date. A 0.5% increase or decrease is used when reporting interest rate risk internally to key management personnel and represents management's assessment of the reasonably possible change in interest rates.

	Fixed interest rate analysis		Variable Interest rate analysis	
	31 Dec 2020 N'000	31 Dec 2019 N'000	31 Dec 2020 N'000	31 Dec 2019 N'000
Increase in interest rate by 50 basis points (+0.5%)	66,100	49,110	(33,050)	(24,555)
Decrease in interest rate by 50 basis points (-0.5%)	(66,100)	(49,110)	33,050	24,555
<b>Impact of increase on:</b>				
Pre-tax profit/(loss)	1,092,036	1,023,753	992,887	950,088
<b>Impact of decrease on:</b>				
Pre-tax profit/(loss)	959,837	925,533	1,058,987	999,198

The tax impact of interest rate movement is not included in the impact on shareholders equity as the final impact will depend on the tax status of the Company when it realises the impact of the interest rate results for tax purposes.

### Equity price risk management

The Company is exposed to equity price risks arising from equity investments primarily from investments not held for unit-linked business. The shares included in financial assets represent investments in listed securities that present the Company with opportunity for return through dividend income and capital appreciation.

**Notes to the financial statements**

Equity investments designated as fair value through other comprehensive income (OCI) are held for strategic rather than trading purposes. The Company has no significant concentration of price risk.

The carrying amounts of the Company's equity investments are as follows:

		<b>31 Dec 2020 N'000</b>	<b>31 Dec 2019 N'000</b>
Equity Securities; - unquoted (fair value through OCI)	7(bii)	541,315	543,764
Equity Securities; - quoted (fair value through profit or loss)	7(bi)	756,657	666,176
		<u>1,297,972</u>	<u>1,209,940</u>

**Equity price sensitivity analysis**

The sensitivity analyses set out below show the impact of a 10% increase and decrease in the value of equities on profit before tax based on the exposure to equity price risk at the reporting date.

	<b>31 Dec 2020 N'000</b>	<b>31 Dec 2019 N'000</b>
10% increase	129,797	120,994
10% decrease	(129,797)	(120,994)
<b>Impact of increase on:</b>		
Pre-tax profit/(loss)	<b>1,153,896</b>	<b>1,095,637</b>
<b>Impact of decrease on:</b>		
Pre-tax profit/(loss)	<b>894,302</b>	<b>853,649</b>

The tax impact of interest rate movement is not included in the impact on shareholders equity as the final impact will depend on the tax status of the Company when it realises the impact of the interest rate results for tax purposes.

**(ii) Credit risk**

Credit risk is the risk of suffering financial loss, should any of the Company's customers, clients or market counterparties fail to fulfil their contractual obligations to the Company. Credit risk arises mainly from interbank, commercial and consumer loans and advances, and loan commitments arising from such lending activities, but can also arise from credit enhancement provided, such as credit derivatives (credit default swaps), financial guarantees, letters of credit, endorsements and acceptances.

The Company is also exposed to other credit risks arising from investments in debt securities and other exposures arising from its trading activities ('trading exposures') including non-equity trading portfolio assets and derivatives as well as settlement balances with market counterparties and reverse repurchase agreements.

Credit risk is the single largest risk for the Company's business; management therefore carefully manages its exposure to credit risk. The credit risk management and control are centralised in a credit risk management team which reports regularly to the Board of Directors and head of each business unit.

**a Credit quality analysis**

**Credit risk grading**

## Notes to the financial statements

The Company uses internal credit risk gradings that reflect its assessment of the probability of default of individual counterparties. The Company use internal rating models tailored to the various categories of counterparty.

Borrower and loan specific information collected at the time of application (such as disposable income, and level of collateral for retail exposures; and turnover and industry type for wholesale exposures) is fed into this rating model. This is supplemented with external data such as credit bureau scoring information on individual borrowers. In addition, the models enable expert judgement from the Credit Risk Officer to be fed into the final internal credit rating for each exposure. This allows for considerations which may not be captured as part of the other data inputs into the model.

The credit grades are calibrated such that the risk of default increases exponentially at each higher risk grade. For example, this means that the difference in the PD between an A and A- rating grade is lower than the difference in the PD between a B and B- rating grade.

The following are additional considerations for each type of portfolio held by the Company:

### b Expected credit loss measurement

IFRS 9 outlines a 'three-stage' model for impairment based on changes in credit quality since initial recognition as summarised below:

- (i) A financial instrument that is not credit-impaired on initial recognition is classified in 'Stage 1' and has its credit risk continuously monitored by the Company.
- (ii) If a significant increase in credit risk ('SICR') since initial recognition is identified, the financial instrument is moved to 'Stage 2' but is not yet deemed to be credit-impaired. Please refer to note b(i) below for a description of how the Company determines when a significant increase in credit risk has occurred.
- (iii) Financial instruments in Stage 1 have their ECL measured at an amount equal to the portion of lifetime expected credit losses that result from default events possible within the next 12 months. Instruments in Stages 2 or 3 have their ECL measured based on expected credit losses on a lifetime basis. Please refer to note b(iii) below for a description of inputs, assumptions and estimation techniques used in measuring the ECL.
- (iv) Purchased or originated credit-impaired financial assets are those financial assets that are credit-impaired on initial recognition. Their ECL is always measured on a lifetime basis (Stage 3).

Further explanation is also provided of how the Company determines appropriate entityings when ECL is measured on a collective basis.

The following diagram summarises the impairment requirements under IFRS 9 (other than purchased or originated credit-impaired financial assets):

Change in credit quality since initial recognition		
Stage 1	Stage 2	Stage 3
(Initial recognition)	(Significant increase in credit risk since initial recognition)	(Credit-impaired assets)
12 month expected credit losses	Lifetime expected credit losses	Lifetime expected credit losses

## Notes to the financial statements

### (i) Significant increase in credit risk

The Company considers a financial instrument to have experienced a significant increase in credit risk when one or more of the following quantitative, qualitative or backstop criteria have been met:

#### Quantitative criteria:

##### *Lifetime PD Assessment*

Changes in the lifetime PDs of exposures are evaluated and applied as one of the criteria for determining a significant increase in credit risk.

The Entity determines a change in the lifetime PDs by comparing the remaining lifetime PDs expected at initial recognition with the remaining lifetime PD at the reporting date. A lifetime PD threshold of 50% is used to assess changes for the determination of significant increase in credit risk. Exposures with changes above the preselected threshold are deemed to have experienced a significant increase in their credit risk.

##### *Credit risk grades*

The Company allocates each exposure to a credit risk grade based on a variety of data that is determined to be predictive of the risk of default and applying experienced credit judgement. Credit risk grades are defined using qualitative and quantitative factors that are indicative of risk of default. These factors vary depending on the nature of the exposure and the type of borrower.

Significant increase in credit risk is also determined through the use of notch differences.

Credit risk grades are defined and calibrated such that the risk of default occurring increases exponentially as the credit risk deteriorates so, for example, the difference in risk of default between credit risk grades 1 and 2 is smaller than the difference between credit risk grades 2 and 3.

Each exposure is allocated to a credit risk grade at initial recognition based on available information about the borrower. Exposures are subject to ongoing monitoring, which may result in an exposure being moved to a different credit risk grade. The monitoring typically involves use of the following data.

#### Qualitative criteria:

- (i) Significant adverse changes in business, financial and/or economic conditions in which the borrower operates
- (ii) Actual or expected forbearance or restructuring
- (iii) Actual or expected significant adverse change in operating results of the borrower
- (iv) Employment Status (for loans only)
- (v) Early signs of cashflow/liquidity problems such as delay in servicing of trade creditors/loans (Days Past Due)

The assessment of SICR incorporates forward-looking information and is performed Periodically at a portfolio level for all financial instruments held by the Company. The criteria used to identify SICR are monitored and reviewed periodically for appropriateness by the independent Credit Risk team.

#### Backstop

A backstop is applied and the financial instrument considered to have experienced a significant increase in credit risk if the borrower is more than 30 days past due on its contractual payments.

### (ii) Definition of default

The Company considers a financial asset to be in default which is fully aligned with the credit-impaired, when it meets one or more of the following criteria:

#### Quantitative criteria

The borrower is more than 90 days past due on its contractual payments.

## Notes to the financial statements

### Qualitative criteria

The borrower meets unlikeliness to pay criteria, which indicates the borrower is in significant financial difficulty. These are instances where:

- (i) The borrower is in long-term forbearance
- (ii) The borrower is deceased
- (iii) The borrower is insolvent
- (iv) The borrower is in breach of financial covenant(s)
- (v) An active market for that financial asset has disappeared because of financial difficulties
- (vi) Concessions have been made by the lender relating to the borrower's financial difficulty
- (vii) It is becoming probable that the borrower will enter bankruptcy
- (viii) Financial assets are purchased or originated at a deep discount that reflects the incurred credit losses.

The criteria above have been applied to all financial instruments held by the Company and are consistent with the definition of default used for internal credit risk management purposes. The default definition has been applied consistently to model the Probability of Default (PD), Exposure at Default (EAD) and Loss given Default (LGD) throughout the Company's expected loss calculations.

### (iii) Measuring ECL – Explanation of inputs, assumptions and estimation techniques

The Expected Credit Loss (ECL) is measured on either a 12-month (12M) or Lifetime basis depending on whether a significant increase in credit risk has occurred since initial recognition or whether an asset is considered to be credit-impaired. Expected credit losses are the discounted product of the Probability of Default (PD), Exposure at Default (EAD), and Loss Given Default (LGD), defined as follows:

- (i) (i) The PD represents the likelihood of a borrower defaulting on its financial obligation (as per "Definition of default and credit-impaired" above), either over the next 12 months (12M PD), or over the remaining lifetime (Lifetime PD) of the obligation.
- (ii) (ii) EAD is based on the amounts the Company expects to be owed at the time of default, over the next 12 months (12M EAD) or over the remaining lifetime (Lifetime EAD). For example, for a revolving commitment, the Company includes the current drawn balance plus any further amount that is expected to be drawn up to the current contractual limit by the time of default, should it occur.
- (iii) (iii) Loss Given Default (LGD) represents the Company's expectation of the extent of loss on a defaulted exposure. LGD varies by type of counterparty, type and seniority of claim and availability of collateral or other credit support. LGD is expressed as a percentage loss per unit of exposure at the time of default (EAD). LGD is calculated on a 12-month or lifetime basis, where 12-month LGD is the percentage of loss expected to be made if the default occurs in the next 12 months and Lifetime LGD is the percentage of loss expected to be made if the default occurs over the remaining expected lifetime of the loan.

The ECL is determined by projecting the PD, LGD and EAD for each future month and for each individual exposure or collective segment. These three components are multiplied together and adjusted for the likelihood of survival (i.e. the exposure has not prepaid or defaulted in an earlier month). This effectively calculates an ECL for each future month, which is then discounted back to the reporting date and summed. The discount rate used in the ECL calculation is the original effective interest rate or an approximation thereof.

Notes to the financial statements

(iv) **Forward-looking information incorporated in the ECL models**

The assessment of SICR and the calculation of ECL both incorporate forward-looking information. The Company has performed historical analysis and identified the key economic variables impacting credit risk and expected credit losses for each portfolio.

These economic variables and their associated impact on the PD, EAD and LGD vary by financial instrument. Expert judgment has also been applied in this process. Forecasts of these economic variables (the "base economic scenario") are provided by the Company's Economics team on a quarterly basis and provide the best estimate view of the economy over the next five years. After five years, to project the economic variables out for the full remaining lifetime of each instrument, a mean reversion approach has been used, which means that economic variables tend to either a long run average rate (e.g. for unemployment) or a long run average growth rate (e.g. GDP) over a period of two to five years.

The impact of these economic variables on the PD, EAD and LGD has been determined by performing statistical regression analysis to understand the impact changes in these variables have had historically on default rates and on the components of LGD and EAD.

In addition to the base economic scenario, the Company's Economics team also provide other possible scenarios along with scenario weightings. The number of other scenarios used is set based on the analysis of each major product type to ensure non-linearities are captured. The number of scenarios and their attributes are reassessed at each reporting date. At 1 January 2019 and 31 December 2019, for all but two portfolios the Company concluded that three scenarios appropriately captured non-linearities. For portfolios [X] and [Y], the Company concluded that two additional downside scenarios were required. The scenario weightings are determined by a combination of statistical analysis and expert credit judgement, taking account of the range of possible outcomes each chosen scenario is representative of. The assessment of SICR is performed using the Lifetime PD under each of the base, and the other scenarios, multiplied by the associated scenario weighting, along with qualitative and backstop indicators (see note b(i)). This determines whether the whole financial instrument is in Stage 1, Stage 2, or Stage 3 and hence whether 12-month or lifetime ECL should be recorded. Following this assessment, the Company measures ECL as either a probability weighted 12 month ECL (Stage 1), or a probability weighted lifetime ECL (Stages 2 and 3). These probability-weighted ECLs are determined by running each scenario through the relevant ECL model and multiplying it by the appropriate scenario weighting (as opposed to weighting the inputs). As with any economic forecasts, the projections and likelihoods of occurrence are subject to a high degree of inherent uncertainty and therefore the actual outcomes may be significantly different to those projected. The Company considers these forecasts to represent its best estimate of the possible outcomes and has analysed the non-linearities and asymmetries within the Company's different portfolios to establish that the chosen scenarios are appropriately representative of the range of possible scenarios.

c **Credit risk exposure**

**Maximum exposure to credit risk – Financial instruments subject to impairment**

For ECL purposes, the bank's financial asset is segmented into sub-portfolios are listed below

- Mortgage loans
- Premium receivables
- Intercompany receivables
- Investment securities
- Placements with other banks

The following table contains an analysis of the credit risk exposure of financial instruments for which an ECL allowance is recognised. The gross carrying amount of financial assets below also represents the entity's maximum exposure to credit risk on these assets.

Notes to the financial statements

ECL staging	Mortgage loans 31 Dec 2020				31 Dec 2019

**Maximum exposure to credit risk – Financial instruments not subject to impairment**

The following table contains an analysis of the maximum credit risk exposure from financial assets not subject to impairment (i.e. FVTPL):

	Maximum exposure to credit risk N'000
<b>Trading assets</b>	
• Debt Securities	-
• Derivatives	-
<b>Equity Investment</b>	-
<b>Financial assets designated at fair value</b>	-
• Debt securities	-
• Loans and advances to customers	-
<b>Total exposure</b>	-

Notes to the financial statements

**Investment securities**

The entity holds investment securities measured at amortised cost with a carrying amount of ₦93.5 million and at FVTOCI with a carrying amount of ₦4,671.8 million. The investment securities held by the entity are sovereign bonds and corporate bonds, which are not collateralised.

**d Loss allowance**

The loss allowance recognised in the period is impacted by a variety of factors, as described below:

- Additional allowances for new financial instruments recognised during the period, as well as releases for financial instruments de-recognised in the period;
- Impact on the measurement of ECL due to changes in PDs, EADs and LGDs in the period, arising from regular refreshing of inputs to models;  
Discount unwind within ECL due to the passage of time, as ECL is measured on a present value basis;
- Foreign exchange retranslations for assets denominated in foreign currencies and other movements; and
- Financial assets derecognised during the period and write-offs of allowances related to assets that were written off during the period (see note ii(e)).

**e Write-off policy**

The entity writes off financial assets, in whole or in part, when it has exhausted all practical recovery efforts and has concluded there is no reasonable expectation of recovery. Indicators that there is no reasonable expectation of recovery include (i) ceasing enforcement activity and (ii) where the entity's recovery method is foreclosing on collateral and the value of the collateral is such that there is no reasonable expectation of recovering in full.

**f Modification of financial assets**

The entity sometimes modifies the terms of loans provided to customers due to commercial renegotiations, or for distressed loans, with a view to maximising recovery.

Such restructuring activities include extended payment term arrangements, payment holidays and payment forgiveness. Restructuring policies and practices are based on indicators or criteria which, in the judgement of management, indicate that payment will most likely continue. These policies are kept under continuous review. Restructuring is most commonly applied to term loans.

The risk of default of such assets after modification is assessed at the reporting date and compared with the risk under the original terms at initial recognition, when the modification is not substantial and so does not result in derecognition of the original asset (refer to notes 3(d)(iv)). The entity monitors the subsequent performance of modified assets. The entity may determine that the credit risk has significantly improved after restructuring, so that the assets are moved from Stage 3 or Stage 2 (Lifetime ECL) to Stage 1 (12-month ECL). This is only the case for assets which have performed in accordance with the new terms for six consecutive months or more.

The entity continues to monitor if there is a subsequent significant increase in credit risk in relation to such assets through the use of specific models for modified assets.

**g Financial assets based on credit risk**

The Company has adopted a policy of dealing with creditworthy counterparties and obtaining sufficient collateral where appropriate, as a means of mitigating the risk of financial loss from defaults. The Company transacts with entities that have an investment grade rating and above.

This information is supplied by independent rating agencies, where available, and if not available, the Company uses other publicly available financial information and its own trading records to rate its major policyholders and reinsurers

## Notes to the financial statements

The Company's exposure and the credit ratings of its counterparties are continuously monitored and the aggregate value of transactions concluded is spread amongst approved counterparties. Credit exposure is controlled by counterparty limits that are reviewed and approved by the risk management committee periodically.

The credit risk on liquid funds and other near cash financial instruments is limited because the counterparties are banks with high credit-ratings assigned by international credit-rating agencies.

The majority of debt securities are investment grade and the company has very limited exposure to sub-standard credits.

Reinsurance assets are reinsurers' share of outstanding claims and reinsurance receivables. They are allocated below on the basis of ratings for claims paying ability.

Loans and receivables from policyholders, agents and intermediaries generally do not have a credit rating.

The following table shows aggregated credit risk exposure for assets with external credit ratings:-

### Maximum exposure to credit risk – Financial instruments not subject to impairment

The following table contains an analysis of the maximum credit risk exposure from financial assets not subject to impairment (i.e. FVTPL):

	Maximum exposure to credit risk N'000
<b>Trading assets</b>	
• Debt Securities	-
• Derivatives	-
<b>Equity Investment</b>	-
<b>Financial assets designated at fair value</b>	-
• Debt securities	-
• Loans and advances to customers	-
<b>Total exposure</b>	-

### Investment securities

The entity holds investment securities measured at amortised cost with a carrying amount of N93.735 million and at FVTOCI with a carrying amount of N4.288 billion. The investment securities held by the entity are sovereign bonds and corporate bonds, which are not collateralised.

## d Loss allowance

The loss allowance recognised in the period is impacted by a variety of factors, as described below:

- Additional allowances for new financial instruments recognised during the period, as well as releases for financial instruments de-recognised in the period;
- Impact on the measurement of ECL due to changes in PDs, EADs and LGDs in the period, arising from regular refreshing of inputs to models;
- Discount unwind within ECL due to the passage of time, as ECL is measured on a present value basis;
- Foreign exchange retranslations for assets denominated in foreign currencies and other movements; and
- Financial assets derecognised during the period and write-offs of allowances related to assets that were written off during the period (see note ii(e)).

Notes to the financial statements

**e Write-off policy**

The entity writes off financial assets, in whole or in part, when it has exhausted all practical recovery efforts and has concluded there is no reasonable expectation of recovery. Indicators that there is no reasonable expectation of recovery include (i) ceasing enforcement activity and (ii) where the entity's recovery method is foreclosing on collateral and the value of the collateral is such that there is no reasonable expectation of recovering in full.

**f Modification of financial assets**

The entity sometimes modifies the terms of loans provided to customers due to commercial renegotiations, or for distressed loans, with a view to maximising recovery.

Such restructuring activities include extended payment term arrangements, payment holidays and payment forgiveness. Restructuring policies and practices are based on indicators or criteria which, in the judgement of management, indicate that payment will most likely continue. These policies are kept under continuous review. Restructuring is most commonly applied to term loans.

The risk of default of such assets after modification is assessed at the reporting date and compared with the risk under the original terms at initial recognition, when the modification is not substantial and so does not result in derecognition of the original asset (refer to notes 3(d)(iv)).

The entity monitors the subsequent performance of modified assets. The entity may determine that the credit risk has significantly improved after restructuring, so that the assets are moved from Stage 3 or Stage 2 (Lifetime ECL) to Stage 1 (12-month ECL). This is only the case for assets which have performed in accordance with the new terms for six consecutive months or more.

The entity continues to monitor if there is a subsequent significant increase in credit risk in relation to such assets through the use of specific models for modified assets.

**g Financial assets based on credit risk**

The Company has adopted a policy of dealing with only creditworthy counterparties and obtaining sufficient collateral where appropriate, as a means of mitigating the risk of financial loss from defaults. The Company transacts with only entities that have an investment grade rating and above.

This information is supplied by independent rating agencies, where available, and if not available, the Company uses other publicly available financial information and its own trading records to rate its major policyholders and reinsurers

The Company's exposure and the credit ratings of its counterparties are continuously monitored and the aggregate value of transactions concluded is spread amongst approved counterparties. Credit exposure is controlled by counterparty limits that are reviewed and approved by the risk management committee periodically.

The credit risk on liquid funds and other near cash financial instruments is limited because the counterparties are banks with high credit-ratings assigned by international credit-rating agencies.

The majority of debt securities are investment grade and the company has very limited exposure to sub-standard credits.

Reinsurance assets are reinsurers' share of outstanding claims and reinsurance receivables. They are allocated below on the basis of ratings for claims paying ability.

Loans and receivables from policyholders, agents and intermediaries generally do not have a credit rating.

The following table shows aggregated credit risk exposure for assets with external credit ratings:-

## Notes to the financial statements

### (iii) Liquidity risk

The Company's principal objective in managing our liquidity and our capital resources is to maximize the returns on capital to shareholders, while enabling us to pay claims, pay dividends, pay staff and fulfill our statutory obligations to our regulators and the different tiers of government in the environment in which we operate. Effective and prudent liquidity is a priority across the company.

Management monitors the liquidity of Royal Exchange General Insurance Limited on a daily basis and projects her financial needs over a multi-year time horizon through our quarterly budget and review process. We believe that the cash flows from the sources of fund available to the Company are sufficient to satisfy the current liquidity requirements of the Company, including under reasonably foreseeable stress scenarios.

In managing our liquidity (and of course our capital), we seek to:

- Match the profile of our assets and liabilities, taking into account the risks inherent in each line of product;
- Maintain financial strength to support new business growth whilst still satisfying the requirements of policyholders and regulators;
- Retain financial flexibility by maintaining strong liquidity, and;
- Allocate liquid resources efficiently to support growth while we pay claims and other commitments promptly.

### Sources of Liquidity

In managing our cash flow position, we have a number of sources of liquidity, including the following principal sources:

- Premium Income;
- Investment income
- Investment assets

### Application of funds

The principal uses of our liquidity include:

- Payment of Claims
- Payment of Staff benefits;
- Purchase of investments' and;
- Payment in connection with financing activities.

The company's assets are mainly made up of cash and bank balances.

**Notes to the financial statements**

***Maturity Profile***

The following table shows the company's expected maturity for its non-derivative assets. The table has been drawn up based on the undiscounted contractual maturities of the assets including interest that will be earned on those assets except where the company anticipates that the cash flow will occur in a different period.

It also shows details of the expected maturity profile of the company's undiscounted obligations with respect to its financial liabilities and estimated cash flows of recognized insurance contract liabilities. It includes both interest and principal cash flows. It is noted that all equity investments have an undetermined maturity.

It should be noted that reinsurers' share of unearned premiums are excluded from this analysis.

Although the company has access to financing facilities, the company expects to meet its other obligations from operating cash flows and proceeds of maturing financial assets and other sources listed in "Sources of Liquidity" above.

## Notes to the financial statements

### Insurance risk management

The Company accepts insurance risk through its insurance contracts where it assumes the risk of loss from persons or organisations that are directly subject to the underlying loss. The Company is exposed to the uncertainty surrounding the timing, frequency and severity of claims under these contracts.

The Company manages its risk via its underwriting and reinsurance strategy within an overall risk management framework. Pricing is based on assumptions which have regard to trends and past experience. Exposures are managed by having documented underwriting limits and criteria. Reinsurance is purchased to mitigate the effect of potential loss to the Company from individual large or catastrophic events and also to provide access to specialist risks and to assist in managing capital. Reinsurance policies are written with approved reinsurers on either a proportional or excess of loss treaty basis.

Regulatory capital is also managed (though not exclusively) by reference to the insurance risk to which the Company is exposed.

### Non-life insurance

The Company writes fire, general accident, oil & gas, engineering, bond, marine and motor risks primarily over a twelve month duration (usually longer for engineering policies). The most significant risks arise from natural disasters, climate change and other catastrophes (i.e. high severity, low frequency events). A concentration of risk may also arise from a single insurance contract issued to a particular demographic type of policyholder, within a geographical location or to types of commercial business. The relative variability of the outcome is mitigated if there is a large portfolio of similar risks.

Notes to the financial statements

The concentration of non-life insurance by the location of the underlying risk is summarised below by reference to liabilities.

## Notes to the financial statements

### Reserving Methods and Assumptions

To ensure the estimates calculated are not biased by the underlying assumptions of the model chosen, four different deterministic methods method were considered.

#### a Chain ladder Method

##### i The Basic Chain Ladder Method (BCL )

The Basic Chain Ladder method forms the basis to deterministic reserving methods explained below. For each class of business, historical paid claims were grouped into accident year cohorts-representing when they were paid after their accident year. These cohorts form the development triangles. Each accident years, paid years, paid claims were accumulated to the valuation date and projected to the valuation date and projected into the future to attain the expected ultimate claim arising in the year. This assumes the trends observed in the historical data will continue. The gross claim reserve is calculated as the difference between the cumulated paid claims and the estimated ultimate claims.

##### ii The Inflation Adjusted Chain Ladder Method (IACL):

Under this method, the historical paid losses were adjusted to allow for inflation to the valuation date using the corresponding inflation index in each of the accident years. The inflation adjusted claims were then treated similarly to the Basic Chain Ladder described above. The projected incremental paid claims are then inflated based on our future inflation assumption to the expected future payment date.

##### iii Discounted Basic Chain Ladder (BCL) and inflation Adjusted Basic Chain Ladder (BCL) and inflation Adjusted Basic Chain Ladder (IABCL)

Historical claims paid were grouped into 10 years cohorts-representing when they were paid after the underwriting year. This is the discounted form of the BCL and IABCL. In determining the value, the future expected cash flow for claim payments is discounted to present day terms using our assumed discount rate.

#### b Loss Ratio Method

Under this method the ultimate claims is obtained by studying the historical loss ratios, investigating any differences and using judgements to derive a loss ratio. Paid claims already emerged were deducted from the estimated Ultimate claims to obtain the reserves.

#### c Bornhuetter-Ferguson Method

This method combines the estimates attained from the Chain Ladder and Loss Ratio methods. The BF methods takes a weighted average of the two estimates, where the weights are related to the number of claims already reported. Therefore, the more past information there is available, the higher the weighting given to the chain ladder estimate.

#### d Frequency and Severity Method

This method investigates the trend of the claim frequency and average cost per claim for each accident year. An average of the fully run off accident years was used as a guide on the ultimate claim frequency and ultimate average cost which was then adopted for the accident years that are not fully run off.

### Method selected-Discounted IABCL

The IBNR reserves are determined using deterministic calculations which provide a "best estimate" of the reserve. The "best-estimate" is determined by applying a combination of the Chain Ladder("CL) and the Bornhuetter-Ferguson ("BF") methods to attritional paid claims triangles. The combination between a CL and BF methods aims to reflect the reliability of information when estimating the IBNR.

For earlier accident years, where the development is reasonably mature, a CL approach was used which relied more heavily on the data to set the ultimate level of claims.

## Notes to the financial statements

For later accident periods where there still exists a large degree of uncertainty about the ultimate level of claims and the reported to date is a less reliable estimate of the ultimate loss, a BF method is used which makes use of an estimate of the ultimate loss ratio.

### Assumptions underlying the Valuation Methods

- i Claims occur uniformly throughout the year for each class of business. This implies that claims occur on an average halfway through year
- ii Future claims follow a regression pattern from the historical data. Hence, payment patterns will be broadly similar in each accident year. The proportionate increase in the known cumulative payments from one.
- iii Development year to the next is used to calculate the expected cumulative payments for the future development period.
- iv An implicit assumption of the chain ladder is that weighted past average inflation will remain unchanged into the future.
- v We assume gross claim amount includes all related claim expenses. If this is not the case, the Company will hold a separate reserve to cover claim expenses.
- vi The UPR is calculated on assumption that the risk will occur evenly during the duration of the policy.
- vii Under the Average Cost per claim method used in estimating large losses, the Company assumed the early years (e.g. accident years 2007, 2008) are fully developed.

The run off period is ten (10) years and hence the method assumes no more claims will be paid subsequently.

### (c) Capital Management

The Company's capital management framework is primarily based on statutory risk-based capital and solvency margin measures. The Company manages its capital to ensure that it continues as a going concern and complies with the regulators' capital requirements while maximizing the return to stakeholders through the optimization its equity balance. The capital structure of the company consists of equity attributable to equity holders of the company, comprising issued capital, reserves and retained earnings. Reinsurance is also used as part of capital management.

The regulatory capital (as required under Insurance Act 2003 and NAICOM Guideline) within the Company has been maintained and preserved over the reporting periods. The minimum regulatory capital for general insurers in Nigeria is N3billion.

The Company equally measures its capital using an economic capital model which is the Company's own assessment of the amount of capital it needs to hold and takes into account both financial and non-financial assumptions. In most cases the internally required capital is determined by the application of percentages to premiums, claims, reserves and expenses.

The Company fully complied with all externally imposed capital requirements throughout the year and this Solvency requirement was revalidated by HR Nigeria Ltd, the Company's Consultant Actuary in 2020 Actuarial Valuation Report.

The objectives, policies and processes for managing capital were unchanged. Under our capital management policy approved by the Board of Directors, the Managing Director and the Chief Financial Officer are authorized to approve capital actions on behalf of the company and to further delegate authority with respect to capital actions to appropriate officers. Any capital commitment that exceeds the authority granted to senior management is separately authorized by the Board.

**Notes to the financial statements**

The table below sets out the capital that is managed by the Company on an IFRS and regulatory basis:

The Insurance Act 2003 (Section 24) prescribed that an insurer shall in respect of its business other than life insurance business, maintain a margin of solvency being the excess of the value of its admissible assets in Nigeria over its liabilities in Nigeria.

The solvency margin, which is determined as the excess of admissible assets over total liabilities shall not be less than 15% of the gross premium income less reinsurance premiums paid out during the year under review or the minimum paid up capital, whichever is greater.

**Solvency margin computation**

The company's solvency position is as follows:

Admissible Assets	31-Dec. 2020		31-Dec. 2019	
	N'000 Total	N'000 Inadmissible	N'000 Admissible	N'000

		<b>31-Dec. 2020</b>	<b>31-Dec. 2019</b>
<b>11(a)</b>	Intercompany receivables	<b>₦'000</b>	<b>₦'000</b>
	Royal Exchange Healthcare Ltd	52,497	57,652
	Royal Exchange PLC	571,812	-
	ECL Impairment: intercompany receivables	(51,881)	(51,881)
	At 31 December	<u>572,428</u>	<u>5,772</u>
	The amount receivable from its Royal exchange healthcare limited represents the intra-group funding advanced to her by the Company for its operational activities. The intercompany balances do not attract any interest charges. There was no redefined repayments terms and the amounts are realised in cash and /or by offsetting with other payables to the Company. Impairment allowance relates to Royal Exchange Healthcare Limited outstanding receivables. Outstanding receivable ages above 365 days and recoverable is doubtful considering other macro-economic variables. Royal Exchange Healthcare Limited has repayment plan that is effective 2021 to offset the outstanding due to Royal Exchange General Insurance Company Limited.		
<b>11(b)</b>	Accrued Investment Income	<b>31-Dec. 2020</b>	<b>31-Dec. 2019</b>

Notes to the financial statements

**16 Statutory Deposits**

In line with section 10 (3) of the Insurance Act of Nigeria, a deposit of 10% of the regulatory share capital is kept with the Central Bank of Nigeria. The cash amount held is considered to be a restricted cash balance.

	31-Dec 2020	31-Dec 2019
	N'000	N'000
Deposits with Central Bank of Nigeria	340,000	340,000

**17 Employee retirement benefits**

The Company operated two(2) employee retirement benefit schemes. The Company operate defined benefit staff pension plan based pension scheme prior to the New Pension Reform Act 2004, for pensionable employees who were in service prior to the introduction of contributory pension scheme.

The Company offers its employees defined benefit plan in the form of long service awards. The plan entitles employee who have spent 10 years and above in the service of the Company to specified awards. This benefit is awarded in different categories depending the number of years in service.

The employee benefit obligations are actuarially determined at the year-end by Logic Professional Services with FRC number FRC/2017/NAS/00000017548. The actuarial valuation is computed based on the "Projected Unit Credit" method. Gains and losses of changes in actuarial assumptions are charged to other comprehensive income. These defined benefit plans exposes the Company to actuarial risks, such as interest rate risks and market risks.

The details of the employee benefit obligations are as below:

	31-Dec 2020	31-Dec 2019
	N'000	N'000

Provision for litigation fees represents amounts provided for in respect of various litigations pending in court. Based on professional advice, the amounts for pending litigations have been set aside to cover the expected losses to the entity on the determination of these litigations.

**v(ii)**

The share of Alesco portion of management fee is the Broker's fee payable to Alesco on Mobil Producing Nigeria (MPN) Operational package policy for year 2020.

**v(iii)**

Accrued solicitor fee are the solicitors fee due to Charis hills (N725,000), Ascendolaw Barristers and Solicitors (N325,000), Pat Dappa & Associate (N1.250million), Sefton Fross (N2.10million) Juliet Ezirim (N3.00million) and Ironsi Emmanuel & Co. (N425,000).

**v(iv)**

The customer deposits are unidentified credits, which cannot be readily ascertained to be all premiums as at 31 December 2020.

**v (v)**

**21(b) Deposit for shares**

There was no deposit for shares made in the financial year 2020. The holding company (Royal Exchange Plc) intended increase of holding interest in REGIC in 2018 with N2billion but this did not materialize which resulted to a refund of the amount placed for deposit for shares in 2019.

Notes to the financial statements

**22 Long term liabilities**

**22(a) Finance lease obligations**

The Company leased certain of its property, plant and equipment under finance leases. The average lease term is 3 years. The Company has options to purchase the equipment for a nominal amount at the end of the lease terms. The Company's obligations under finance leases are secured by the lessors' title to the leased assets.

Interest rates underlying all obligations under finance leases are fixed at respective contract dates ranging from 18% to 24% (2019: 18% to 24%) per annum.

## Notes to the financial statements

### 41 Contingencies and Commitments

#### a Commitments for expenditure

The Company has no commitment for capital expenditure at the reporting date.

#### b Contingencies and commitments

	31-Dec. 2020	31-Dec. 2019
	N'000	N'000
<i>Contingent liabilities</i>		
Legal proceedings and litigations	3,019,298	3,819,657
<i>Contingent assets</i>		
Legal proceedings and litigations	11,672	11,672

The Company in its ordinary course of business, is presently involved in 36 (2019:35) litigation cases as a plaintiff and defendants. The total amount claimed in the cases against the Company is stated above. The Directors having sought the advice of professional legal counsel are of the opinion that based on the advice received, no additional provisions other than those in the books are deemed necessary for these claims.

#### c Dividend

In the year under review, the Board of Directors is yet to propose and recommend the dividend payout by the Company. This is as a result of the expected conclusion of a proposed investment by a potential investor, AFRICINVEST-FIVE into the equity of the Company.

Upon confirmation of this expectation, the Board will reconvene to recommend payouts should they deem fit.

The recommendation if any, shall be presented to the shareholders at the 13th Annual General Meeting of the Company for members' approval.

### 42 Events after the reporting period

There were no major events after the reporting period that require adjustments or disclosure in the financial statements.
